AUTOMOTIVE SOLUTIONS

Cypress's automotive-grade products adhere to the most stringent standards in the industry.

These products:

- Meet or exceed the toughest automotive-grade qualifications
- Employ strict, zero-defect manufacturing processes
- Give automotive customers pipeline visibility and end-to-end traceability
- Benefit from long product lifecycles based on reliable process technologies
- Utilize dedicated process flows with in-line inspections, controls, and monitors

PSoC[®] PROGRAMMABLE SYSTEM-ON-CHIP

Cypress's PSoC[®] programmable system-on-chip device integrates configurable analog and digital peripheral functions, memory, and a microcontroller on a single chip. With an extremely flexible visual embedded design methodology that includes preconfigured, user-defined peripherals and hierarchical schematic entry, you can change your mind as often as you want and still stay on schedule.

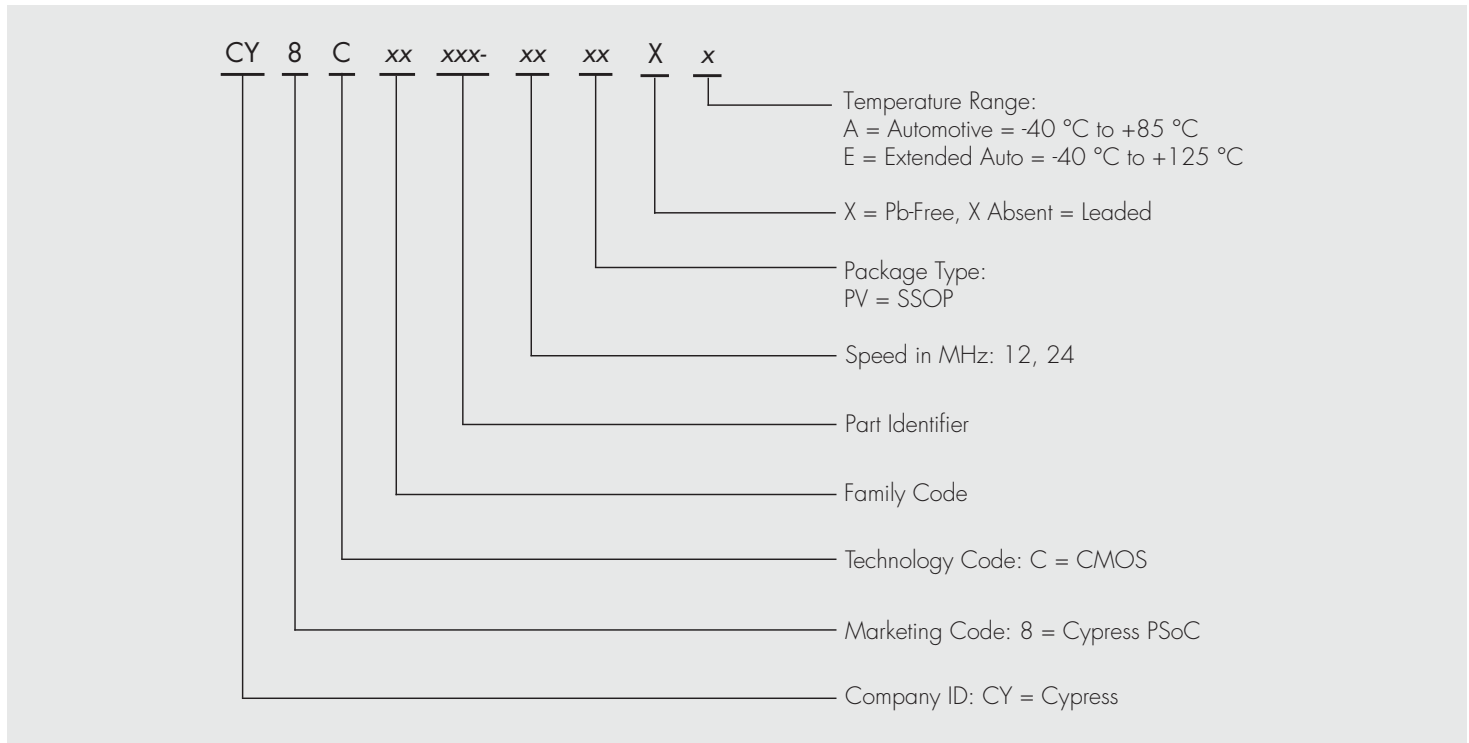

PSoC's configurable blocks enable you to:

- Adapt to changing feature requirements
- Meet aggressive development deadlines
- Make products that satisfy market demands
- Adjust designs during debug/system qualification

CAPSENSE® TOUCHSENSING SOLUTIONS

Automotive CapSense® solutions (CY8C20x34) are a fully-programmable platform that support up to 10 capacitive buttons and two sliders. In addition, two-dimensional track pad solutions are also supported. The CapSense Plus™ family has the most features in the CapSense portfolio. It can support up to 44 capacitive buttons and up to eight sliders. CapSense Plus also provides support for advanced functionalities such as proximity detection, two-dimensional track pads, and analog/digital design integration. In addition to these, we also have devices, which support LIN protocol for in-car connectivity needs.

TRUETOUCH® TOUCHSCREEN SOLUTIONS

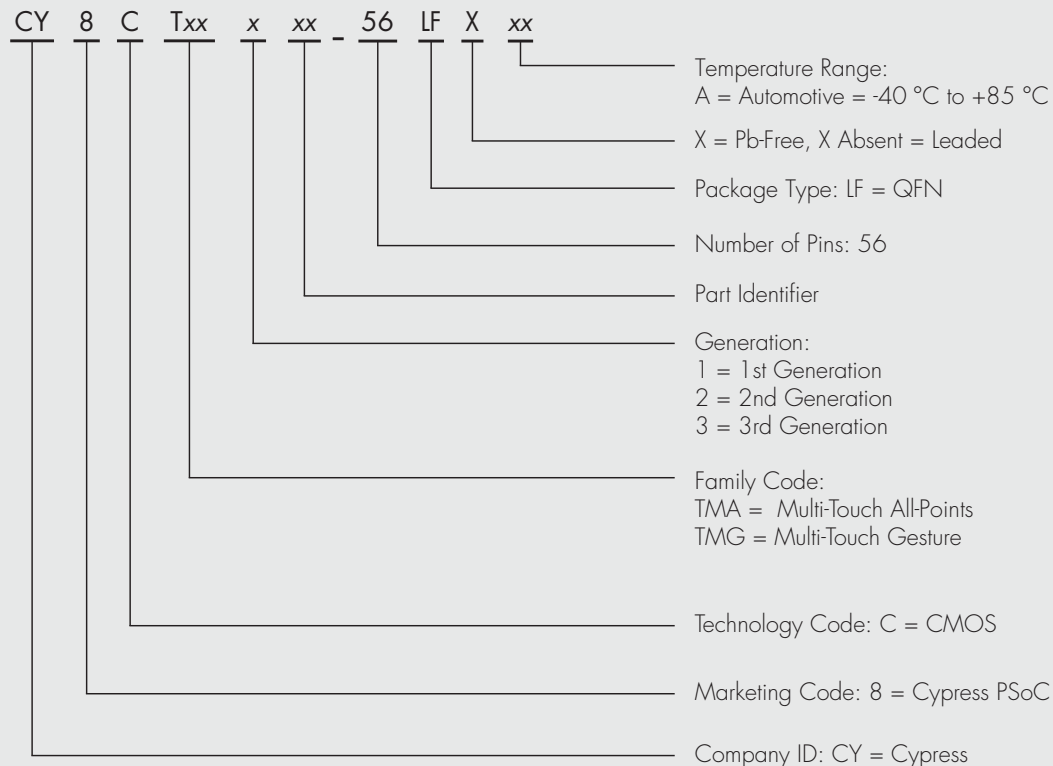

Cypress, the leader in capacitive touchsensing solutions, is revolutionizing the touchscreen market. Cypress's TrueTouch® touchscreen solutions, powered by PSoC technology, offer unmatched flexibility and the broadest portfolio available. The projected capacitive TrueTouch solutions give designers a choice between different usage models, different touchscreen vendors, and different LCD vendors. They also enable designers to accommodate last minute changes - something no other touchscreen product can deliver.

Cypress's automotive portfolio includes multitouch gesture solutions for mid-level capabilities and multitouch all-point solutions for the maximum in touch interaction.

PLANNED TRUETOUCH TOUCHSCREEN DEVICES

CY8CTMA884/616 are single-chip solutions for automotive touchscreen applications. TMA884 delivers up to 884-node, high-performance, projected-capacitance sensing for up to 11.6-inch designs. It employs TrueTouch multi-touch all-points sensing to track up to 10 fingers simultaneously with no ghosting and 0.5-mm accuracy.

Part Number	Max. Sensor Inputs	Max. Fingers Supported	I ² C	Capacitive Buttons	Gestures	Temperature Range (°C)	Packages	Status

SRAM

Cypress provides the broadest SRAM portfolio from 256 Kb to 4 Mbit for its fast asynchronous memories and 256 Kbit to 16 Mbit for its low-power asynchronous memories. The products are available in industry standard voltage, bus width, and package options. Cypress's SRAMs are ideal for ECUs, TCUs, infotainment systems, dashboard clusters, and other applications. We also have a 9 Mbit standard synchronous SRAM in our portfolio.

SYNCHRONOUS SRAM PART NUMBER DECODER

USB

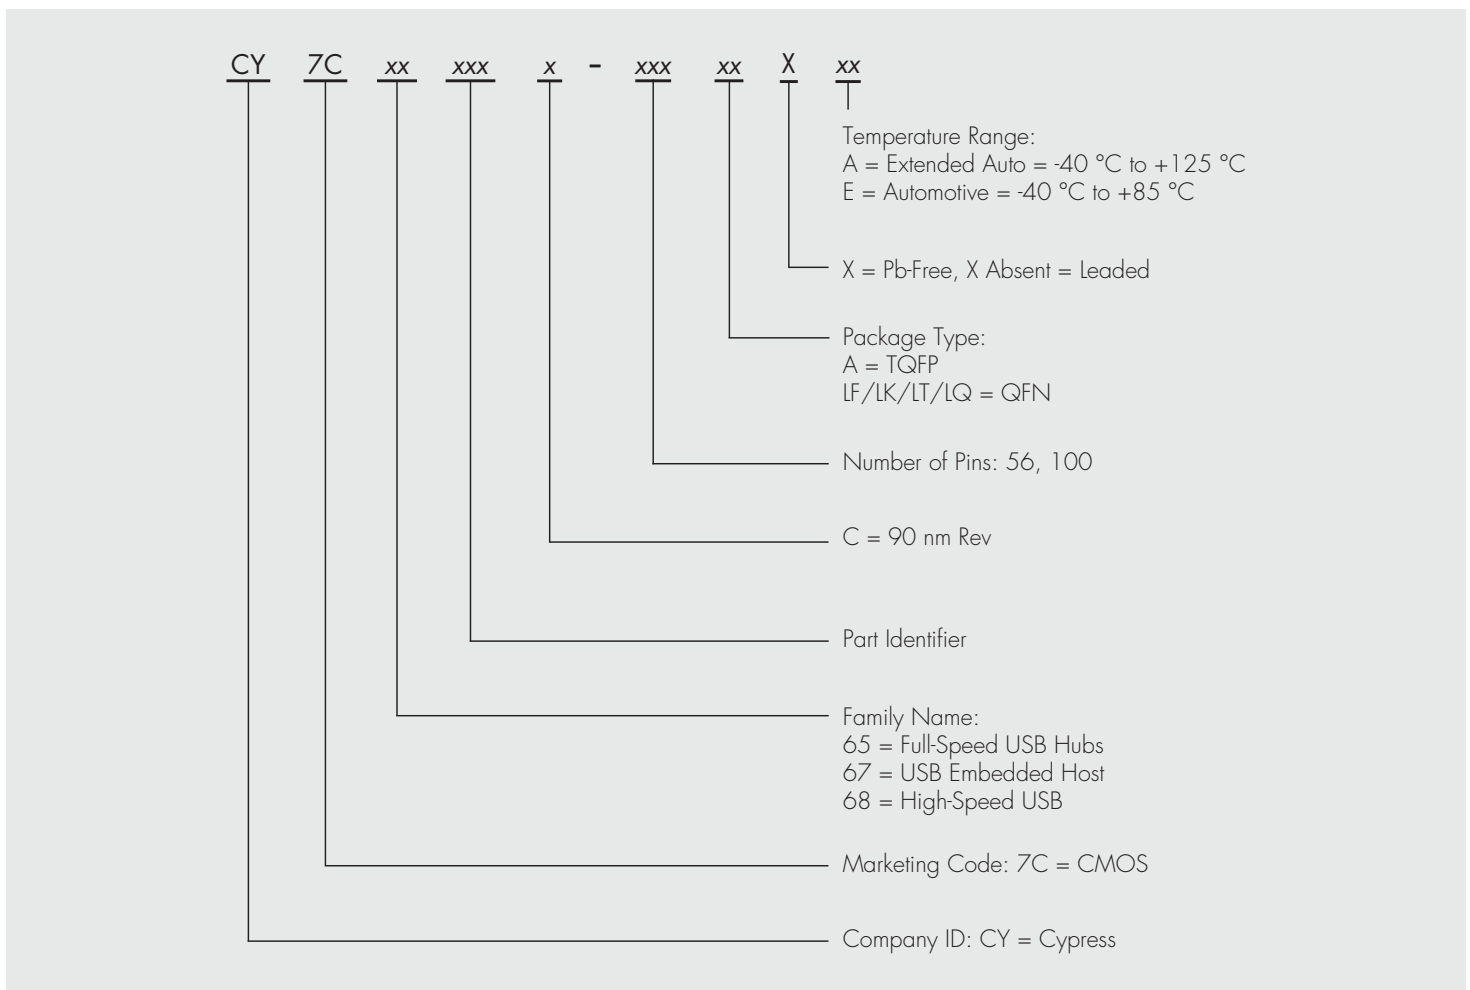

The main applications for USB devices in automotive include entertainment systems, navigation systems, and data recorders where USB allows devices such as phones, CD/HD drives, and pen drives to be connected to these systems. Based on the application, one would either need a host, hub, or a peripheral. The following devices are already AEC Q100 qualified and Cypress plans to add more devices from our industrial portfolio based on customer requirements.

- USB Embedded Full-Speed Hosts: World's first automotive-qualified Full-Speed embedded host/peripheral controller; microprocessor-based 4-port embedded host/ peripheral controller
- USB Embedded High-Speed Hub: Automotive-qualified, low-power USB 2.0 hub controller, 2/4-port/single transaction translator

CAPSENSE® CAPACITIVE TOUCHSENSING SOLUTIONS

Cypress is the world leader in capacitive sensing technologies. Our broad range of solutions provide robust noise immunity, enable quick time-to-market, and system scalability. This vast portfolio ranges from simple buttons and sliders to more sophisticated solutions integrating other system components to reduce total BOM cost and system form factor.

The key requirements of this market are low power consumption, wide voltage range operation, small form factor packaging, and performance across a variety of overlay materials and thicknesses. Cypress's low-power technology enables run-mode current as low as 15 μ A per button and operating voltage as low as 1.71 volts. Industry-leading small form factor packaging such as WLCSP that is under 2 mm x 2 mm and a wide variety of small outline and QFN packages optimize board space. Advanced sensing techniques easily provide finger detection through 15 mm glass or 5 mm plastic overlays. This portfolio also enables additional user interface functionality such as LED effects, proximity, and water proofing.

CapSense® Express™ is a hardware or I²C configurable family supporting simple button/slider designs with up to 16 capacitive buttons and one slider. The CapSense programmable family supports up to 33 capacitive buttons and five sliders. The full-featured CapSensePLUS™ offering handles up to 44 capacitive buttons and eight sliders. It also supports advanced functionalities such as proximity detection, water tolerance, and system integration of various analog and digital blocks. Cypress recently introduced the revolutionary SmartSense™ Auto-tuning solution to the CapSense portfolio. This innovation is the next quantum step in the simplicity of adding a capacitive sense user experience to an ever-broader range of end products.

CAPSENSE EXPRESS

Cypress's CapSense Express with SmartSense Auto-tuning takes the guesswork out of touchsensing design. CapSense Express solutions make button replacement easy by eliminating unnecessary software tools, firmware development, device programming, and system tuning. This reduces time-to-market and eliminates the learning curve for designers who are new to capacitive touchsensing interfaces.

ADVANCED TOUCHSENSING SOLUTION

In a typical CapSense application, there can be significant variation in baseline signal counts due to variability in environmental and noise conditions. Cypress's revolutionary SmartSense Auto-tuning technology, built into CapSense Express, establishes, monitors and maintains the requisite SNR (Signal-to-Noise Ratio) levels for optimal CapSense performance. Further, in moving from the prototype stage to mass production, manufacturing variations in PCB and/or overlay material can affect the parasitic or intrinsic capacitance of the system. SmartSense Auto-tuning automatically detects the sensor capacitance threshold level and dynamically optimizes system performance. The CapSense Express family makes the most of Cypress's broad technology portfolio and years of user-interface know-how so designers can focus on end product development and timely market introductions.

CAPSENSE EXPRESS: THE SMART AND SIMPLE ANSWER TO BUTTON REPLACEMENT

Cypress offers the broadest portfolio of capacitive touchsensing products on the market. It's CapSense Express Mechanical Button Replacement (MBR) family of capacitive touchsensing controllers is designed for a wide range of applications, with broad operating ranges, strong immunity to RF and AC noise, and the ability to operate at very low power levels.

The CY8CMBR2044 solution provides up to four hardware-configurable CapSense buttons with direct LED drive capability. It is provided in the smallest CapSense Express package, a 16-pad QFN (3x3x0.6 mm).

The CY8CMBR2016 makes it easy to create a capacitive matrix keypad, with hardware-configurable options to implement either a keypad or up to 16 individual CapSense buttons. Featuring industry-standard host interface communication protocols, such as Keypad Scan, Truth Table, and Encoded GPO, this solution is available in a 48-pad QFN (6x6x0.6 mm) package.

The CY8CMBR2010 is a 10-button hardware configurable CapSense Express solution with direct LED drive capability. This solution is available in a 32-pad QFN (5x5x0.6 mm) package.

The CY8CMBR2110 (register configurable variant) is a 10-button CapSense Express solution that is paired with the new EZ-Click Customizer Tool to offer a wide array of LED effects without the need to create custom firmware .

CY8CMBR2X10 ULTRA LOW POWER 10 BUTTON/10 LED CAPSENSE EXPRESS WITH SMARTSENSE™ AUTO-TUNING TECHNOLOGY

The CapSense Express family is further strengthened with the addition of a new series, the CY8CMBR2x10-24LQXI/T. This device is a follow-on to the CY8CMBR2044, (four button/ four LED solution) device with an added feature of pre-configured LED effects. Cypress's CapSense Express solutions make button replacement easy by eliminating unnecessary software tools, firmware development, device programming, and system tuning. This reduces time-to-market and eliminates the learning curve for designers who are new to capacitive touch-sensing interfaces.

The CY8CMBR2x10 is a ten-button hardware/register configured CapSense Express solution that offers a direct LED drive and enables pre-configured LED effects. It has a wide operating voltage range: 1.71 V to 5.5 V and ultra low-power consumption of 15 uA per button active current and 100 nA deep sleep. The hardware/register configurability feature eliminates the need for software tools, firmware development and chip programming. The capacitive sensing technology is based on patented CSD technology for robust immunity to conducted and radiated noise. The CY8CMBR2x10 device is enabled with Cypress's revolutionary SmartSense™ auto-tuning algorithm eliminating the need for system tuning. This advancement in solution simplicity enables designers to include a capacitive touch sensing UI without risk to the end product development schedule. Essentially, the UI design task has been reduced to the PCB layout of the sensor board – the CapSense Express controller handles rest. The register-configurable variant CY8CMBR2110-24LQXI will be paired with the new EZ-Click™ Customizer Tool for fully customizable LED effects without the need to write custom firmware. This feature will accelerate time-to market by providing simple graphical configuration options. This device also comes with system diagnostics features such as Failure mode analysis and Serial Debug data.

Key Applications: Industrial control panels, portable medical devices, small home appliances, fitness equipment, digital still and video cameras, gaming devices, handheld devices, home entertainment, home automation, portable media players, remote controls, toys, security systems, Bluetooth headsets, LCD TVs, monitors, white goods, printers, industrial applications, consumer electronics, mobile phones.

*GPIO and Capacitive I/O pins are dedicated and fixed. These pins function simultaneously, i.e. a finger on the Capacitive I/O pin triggers the state change on the pre-assigned GPIO pin.

Key Applications: Security panels, card reader keypads, biometric scanner keypad, fire alarm control panel, thermostats, consumer and medical devices, mobiles, industrial devices

CY8C20xx7/S ULTRA-LOW POWER CAPSENSE CONTROLLER WITH BEST-IN-CLASS SNR AND NOISE IMMUNITY FOR PROXIMITY AND WATER-TOLERANT DESIGNS

The latest addition to the Cypress CapSense® controller portfolio– the ultra low power CY8C20xx7/S family supports up to 31 capacitive touch sensing channels to enable buttons, sliders, wheels and proximity sensors. Featuring the industry's lowest average power consumption - 28 μ A per sensor at a 125 ms scan rate makes it ideal for portable applications. The wide operating voltage range of 1.71 to 5.5 V enables a broad range of end products, fitting the regulated 1.8 V, 3 V, and 5 V space as well as in unregulated battery applications.

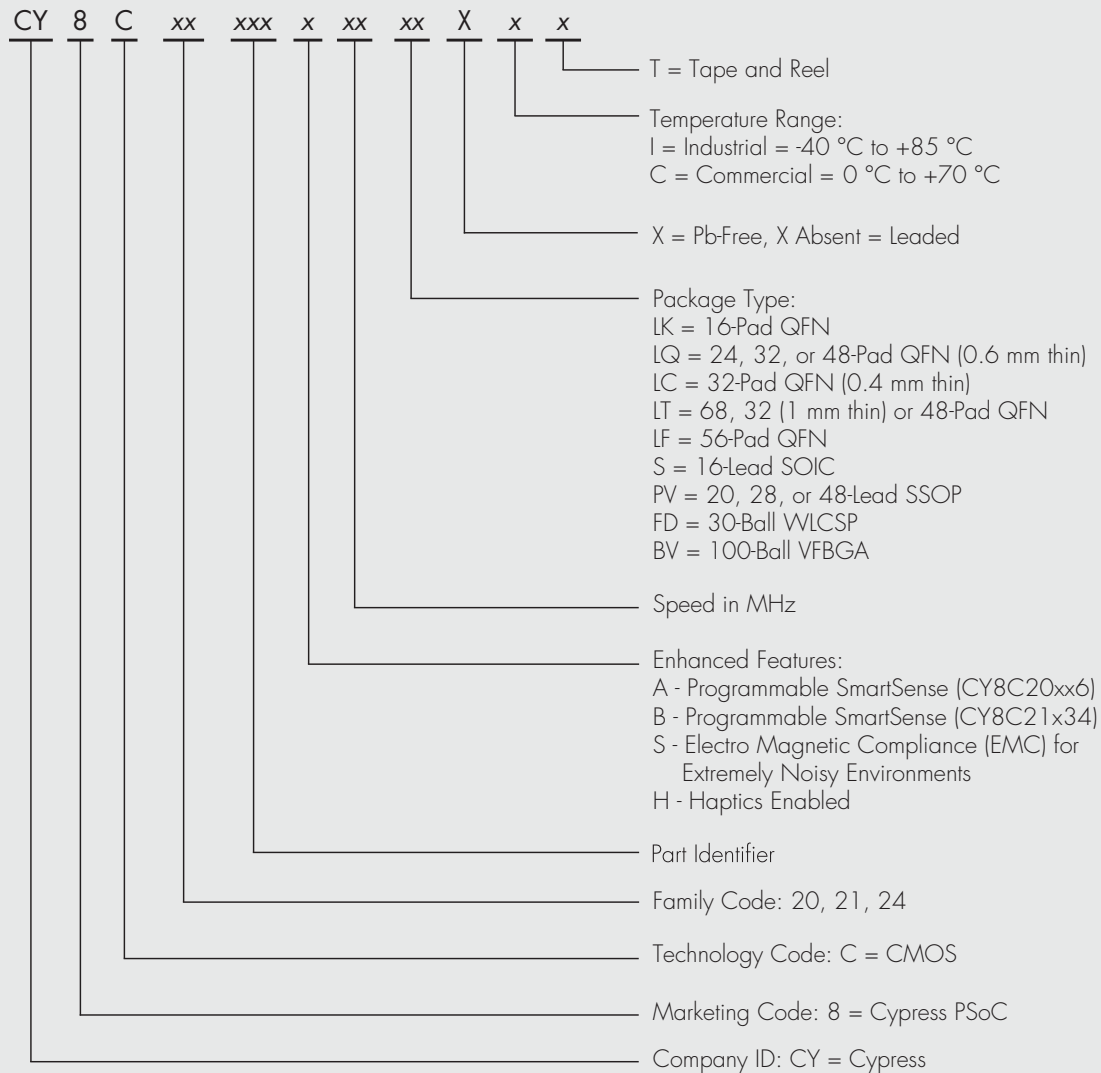

Cypress' QuietZone™ technology based on years of R&D efforts and user-interface design experience enhances immunity against radiated and conducted noise. A key component of this technology is the Capacitive Sigma Delta (CSD PLUS) sensing algorithm delivering superior SNR for optimal sensor performance even in extreme noisy environments. The CY8C20xx7S devices feature the patented SmartSense™ auto-tuning which monitors and maintains optimal sensor performance in run time.

The CY8C20xx7/S family enables proximity sensing up to 30 cm at 1.8 volts. These devices feature driven shield to enable water tolerance delivering accurate touch responses in moist conditions like mist and water droplets and eliminates false triggers in the presence of streaming water.

APPLICATIONS BEST SUITED FOR CY8C20xx7/S

• White goods • Small home appliances • PC peripherals • STB, DVD players, PMP • TVs and monitors • Tablet and mobile handsets

CapSensePLUS Part Number Decoder

CapSense – Quick Reference – Layout Best Practices

The information and parameters in the following table are recommendations for achieving optimal sensitivity for capacitive sensing with Cypress CapSense and CapSense Express devices. These recommendations are not hard and fast rules. Rather, they serve as a guide for designers as CapSense applications are developed. For more information and explanations of each of these parameters, please refer to the 'Getting Started Guide' and the User Module datasheets for CSA and CSD.

	Category	Minimum	Maximum	Remarks / Recommendations
1	Button shape	-	-	Solid round pattern or rectangle with curved edges
2	Button size	5 mm	15 mm	Recommended 10 mm
3	Button-button spacing	1 mm	-	Spacing between two adjacent buttons should be large enough that if one button is pressed, the finger should not reach the annular gap of the other button.
4	Button ground clearance	0.5 mm	2 mm	Button ground clearance = overlay thickness
5	Ground flood - top layer	-	-	Hatched ground 7 mil trace and 45 mil grid
6	Ground flood - bottom layer	-	-	Hatched ground 7 mil trace and 70 mil grid
7	Slider segment pattern	-	-	Sawtooth pattern
8	Number of slider segments	5	-	Maximum depends on available I/O CapSense pins
9	Slider segment size	2 mm	7 mm	2 mm
10	Slider segment spacing	0.5 mm	2 mm	Slider segment spacing = overlay thickness
11	Trace length from pin to CapSense - buttons	-	300 mm	<100 mm. Trace length should be minimized. Long trace length requires large sensor size and a thin overlay in order to provide adequate signal from the sensor.
12	Trace length from pin to CapSense - slider	-	230 mm	<100 mm
13	Trace width	0.17 mm	0.20 mm	0.17 mm (7 mil)
14	Trace routing	-	-	Traces should be routed on the non-sensor side. If any non-CapSense trace crosses CapSense trace, ensure that intersection is orthogonal.
15	Via position for the sensors	-	-	Via should be placed near the edge of the button/slider to reduce trace length thereby increasing sensitivity.
16	Via hole size for sensor traces	-	-	10 mil
17	Number of via on sensor trace	1	2	1
18	CapSense and LED resistor placement	-	-	Place CapSense and LED resistors close to PSoC for noise suppression. CapSense resistors have highest priority - place them first.
19	Distance between any CapSense trace to ground flood	10 mil	20 mil	20 mil
20	CapSense controller placement	-	-	Mount CapSense controller on the layer opposite to sensor. The distance between CapSense controller and sensors should be minimized.
21	Placement of components in two layer PCB			Top layer - buttons; Bottom layer - CapSense controller, other components and traces
22	Placement of components in four layer PCB			Top layer - buttons; Layer 2 - traces; Layer 3 - ground; Bottom layer - CapSense controller and other components
23	Overlay thickness - buttons	0 mm	5 mm (acrylic/plastic overlay)	Based on customer requirement
24	Overlay thickness - sliders	0 mm	2 mm	Based on customer requirement
25	Overlay material			Needs to be non-conductive material - glass, ABS plastic, formica.
26	Overlay adhesives			Adhesive should be non-conductive and dielectrically homogenous. Use 467MP and 468MP adhesives made by 3M.
27	Board thickness	0.5 mm		Standard board thickness for CapSense FR4-based designs is 1.6 mm.

CLOCKS & BUFFERS

Cypress is the leader in programmable timing solutions for consumer electronics, communication, networking, and industrial applications. Cypress has a broad portfolio of devices including single and multiple-PLL programmable clock synthesizers, programmable crystal oscillators, VCXO, EMI reduction clocks, programmable skew, and zero and non-zero delay buffers.

CLOCK DISTRIBUTION

Cypress provides the industry's broadest buffer portfolio which includes:

- Non-Zero Delay Clock Buffers
- Zero Delay Buffers
- RoboClock™ Skew Management Buffers
- High Performance Buffers

High Performance Buffers

The High Performance Buffer (HPB) family of ultra-low jitter, non-PLL fanout buffers delivers up to 10 high-frequency (up to 1.5 GHz) differential outputs (LVPECL, LVDS, or CML). HPB delivers the industry's lowest additive jitter (0.06 ps typical RMS phase jitter) and can provide complete high-frequency, low-jitter clock tree solutions in conjunction with [FlexIO™](#) clock generators.

Key Features

- 2.5 V or 3.3 V operation
- Ultra-low additive RMS phase jitter: 0.06 ps typical
- Up to 10 outputs
- Output frequency up to 1.5 GHz
- Supported outputs: LVPECL, LVDS, or CML
- Supported inputs: LVDS, LVPECL, or LVCMOS
- Low output-output skew: as low as 20 ps
- Commercial and industrial temperature ranges
- Packages: 32-TQFP, 20-TSSOP, 8-TSSOP, 8-SOIC

Competition Comparison

Cypress's High Performance Buffer offers best-in-class jitter as compared to competition.

	Two Output LVPECL (8L SOIC)	Two Output LVPECL (8L TSSOP)	Four Output LVDS	10 Output LVPECL
Cypress	52 fs	58 fs	59 fs	56 fs
Competitor A	128 fs	153 fs	216 fs	146 fs
Competitor B	-	121 fs	-	105 fs
Competitor C	-	-	-	125 fs

Non-Zero Delay Buffers

Cypress's Non-Zero Delay Buffers or Fanout Buffers copy the input clock to multiple outputs. Non-Zero Delay Buffers are ideal for low power requirements with space-saving packages with low skew and low EMI outputs.

RoboClock™ Skew Management Buffers

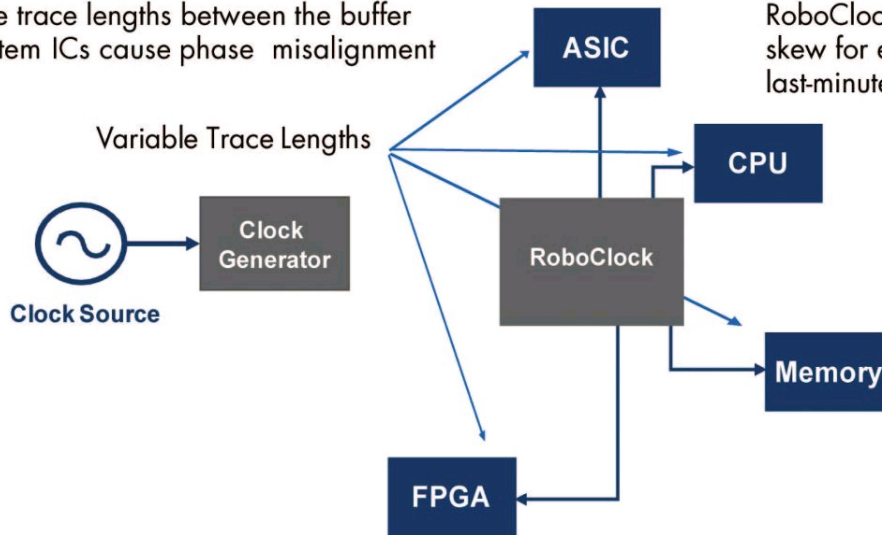

The RoboClock™ high-speed, multiphase, phase-locked loop (PLL) clock buffer offers features such as:

- Programmable output skew
- A programmable multiply/divide factor
- User-selectable redundant reference clocks that provide fault tolerance

Designers can control output skew and multiply and divide factors to help accommodate last-minute changes. Maximum flexibility and extensive AC testing on each device ensures a safe design. RoboClock offers a high-performance timing solution for designers of communications, computation, and storage networking applications.

CHALLENGE:

Variable trace lengths between the buffer and system ICs cause phase misalignment

CYPRESS SOLUTION:

RoboClock buffer has programmable output skew for each individual output clock, accommodates last-minute changes and ensures safe design

Cypress RoboClock Solution

Zero Delay Buffers

Cypress has a broad portfolio of zero delay buffers (ZDB). Cypress's ZDB family contains devices with different architectures, feedback mechanisms, frequency multiplications, number of outputs, output enable functionalities, spread aware functionalities, field programmable functionalities and many more. See diagram below for the ZDB family tree.

Zero Delay Buffer

For more information on Zero Delay Buffers, visit www.cypress.com/go/zdb.

Specification Comparison - CY2305/CY2309

CY2305 and CY2309 are the most popular devices in the ZDB family. The table below compares specifications for these devices for standard drive and high drive version.

Output Drive Option	Buffer Types	Five-Output Devices	Nine-Output Devices	Supply Voltage (V)	Frequency (MHz)	Cycle-Cycle Jitter (ps) ^[1]	Output Skew (ps)	Rise & Fall Time, max (ns) ^[2]	Duty Cycle (%) ^[3]	Spread Aware
Standard Drive (I _{OL} = 8 mA I _{OH} = 8 mA)	Standard Buffer	CY2305	CY2309	3.3	10 – 133	200	250	2.5	40/60	No
	Standard Buffer	CY2305C	CY2309C	3.3	10 - 133	175	200	2.25	45/55	No
	Enhanced Performance Buffer	CY23EP05	CY23EP09	3.3 2.5	10 – 167 10 – 133	55 – 125 95 – 100	100	0.6 – 1.6 1.5	47/53	No
	Spread Aware Buffer	CY23S05	CY23S09	3.3	10 - 133	200	250	2.5	40/60	Yes
High Drive (I _{OL} = 12 mA I _{OH} = 12 mA)	Standard Buffer	CY2305	CY2309	3.3	10 - 133	200	250	1.5	45/55	No
	Standard Buffer	CY2305C	CY2309C	3.3	10 – 133	175	200	1.5	45/55	No
	Enhanced Performance Buffer	CY23EP05	CY23EP09	3.3 2.5	10 – 220 10 – 200	55 – 100 65 – 145	100 100 – 110	0.5 – 1.2 1.2 – 2.1	47/53	No
	Spread Aware Buffer	CY23S05	CY23S09	3.3	10 – 133	200	250	1.5	45/55	Yes
			CY2309NZ	3.3	0 – 133	N/A	250	1.5	40/60	N/A

CLOCK GENERATION

Cypress has a broad portfolio of devices that comprises:

- Application Specific Clocks
- EMI Reduction Clocks
- FleXO™ High Performance Clocks
- Programmable Clocks
- Programmable XO's
- VCXO Clocks

Application Specific Clocks

Application Specific Clocks are optimized for the special requirements of their target system applications. They include:

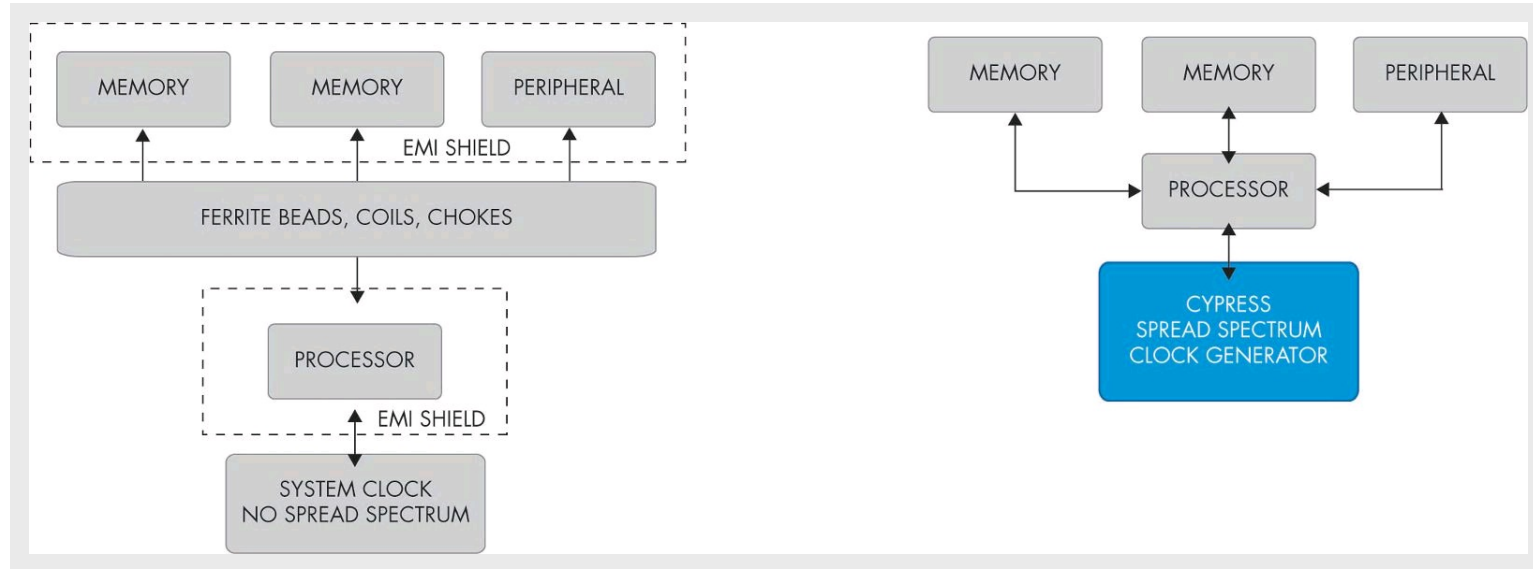

Direct Rambus® Clock Generator - Cypress provides XDR Clock Generator (XCG) for Rambus Extreme Data Rate (XDR) clocking – up to 800 MHz. Cypress XCG enables Rambus XDR to provide 6.4 Gbps peak bandwidth. They are ideal for graphics processing, consumer electronics, and server applications.

PCI Express Clock Generator - Cypress offers Clock source for PCI Express SERDES / Interface with 100 MHz differential signaling (HCSL). These devices incorporate Lexmark Spread Spectrum profile for maximum electromagnetic interference (EMI) reduction. Commercial and industrial grade parts are available for each device.

EMI Reduction Clocks

Cypress offers clock generators with programmable spread spectrum to optimize EMI reduction. By using a Cypress spread spectrum clock, you never need to worry about potential EMI test failures or changing your design. Cypress even has a spread spectrum clock in a standard crystal oscillator ceramic package which can be used as a drop-in spread spectrum replacement for any crystal oscillator.

FleXO™ High Performance Clock Generator

FleXO™ is the industry's most flexible family of ultra low-jitter clock generators, ideal for networking equipment and other high-performance applications. The FleXO family exceeds the clock requirements for demanding high-speed serial interface standards such as 10 Gigabit Ethernet, 10 Gigabit Fibre Channel, SAS/SATA, and PCI Express.

FleXO clock generators can be instantly programmed in the factory or field to frequencies up to 690 MHz, enabling designers to optimize system performance and use a single device across a family of platforms. A key FleXO feature, frequency margining, enables designers to vary clock frequency with 100 ppm precision to test system robustness across potential frequency fluctuations during both design and production stages.

FleXO products are available both as clock synthesizers (requiring external crystals) and as crystal oscillators (XOs) with integrated crystals. The XOs come in an industry standard 5.0 mm x 3.2 mm ceramic LCC package and can operate at 2.5 V or 3.3 V with LVDS and LVPECL outputs, while the synthesizers come in 8-pin or 16-pin TSSOP packages. The FleXO high performance PLL-based XOs and SAW oscillators, maintaining the advantages of the former (low cost, short cycle times, good temperature stability) while offering competitive performance with the latter (output frequencies up to 690 MHz, typical RMS phase jitter below 0.6 ps).

FleXO-THE INDUSTRY'S MOST FLEXIBLE FAMILY OF ULTRA-LOW JITTER CLOCK GENERATOR

Features:

- Ultra-low jitter maximizes system performance and reliability
 - RMS Phase Jitter (12 kHz to 20 MHz): as low as 0.6 ps typical
 - Differential output: LVPECL or LVDS
- Unparalleled flexibility
 - Programmable frequency from 50 to 690 MHz
 - Integrated frequency margining with 100 ppm precision
- Cost-effective architecture provides strong alternative to SAW oscillators and overtone XOs
- Available as synthesizer, VCO, crystal-inside XO, and VCXO options

Key Applications: Switches, routers, storage servers, blade servers, wireless basestations, test equipment, and enterprise hard-disk drives

For more information on FleXO visit www.cypress.com/go/flexo

Integrated Frequency Margining

FleXO clock generators enable designers to vary clock frequency with 100 ppm precision to test system robustness across potential frequency fluctuations

The following table lists available FleXO crystal oscillators pre-configured to support commonly-used frequencies in networking, communications, and other high-speed, high-end consumer applications.

Programmable Clocks

Programmable timing solutions combine the convenience of field programming with the customary high performance of Cypress's timing products. Use CyClockWizard software to optimize device parameters.

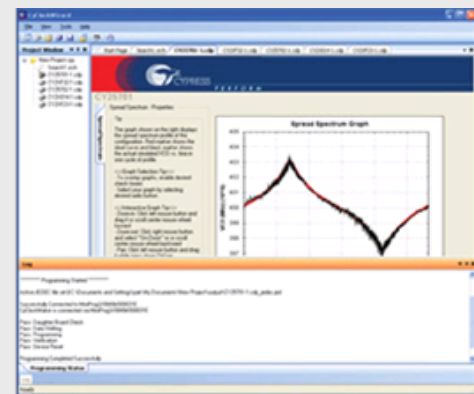

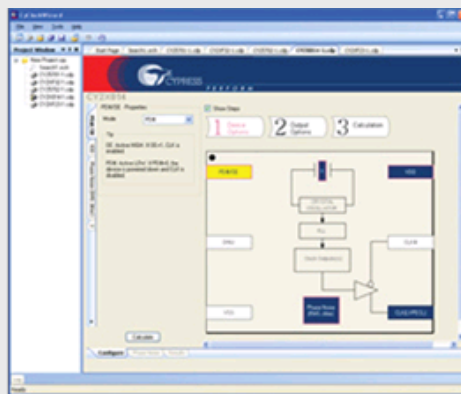

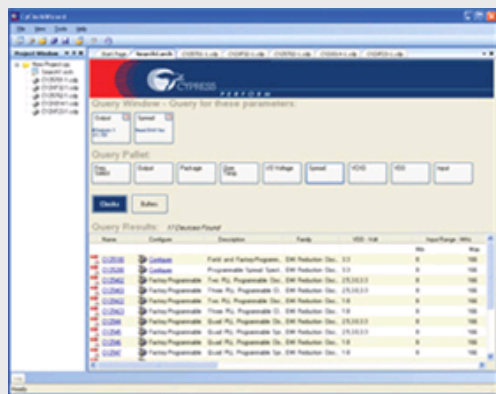

View software and drivers online at www.cypress.com/go/clocksoftware. Each programmed device can be optimized for a specific board layout.

In-System Programmable (ISP) Clocks, also known as In-System Reprogrammable (ISR) Clocks, are customizable at any point in the lifetime of the product. A customized clock configuration can be programmed through the I2C interface to enable one part number to be ordered, stocked, and placed on different boards, then customized with the specific frequencies as required.

CYCLOCKWIZARD 1.0

CyClockWizard is a software tool that enables users to customize Cypress timing solutions to meet their unique requirements in three easy steps:

1. Identify the right timing solution through a parametric search engine
2. Custom-configure the device using an intuitive GUI
3. Program the field-programmable devices for engineering evaluation

CyClockWizard supports the following devices:

CY2077, CY22394, CY25701, CY2213, CY22395, CY25702, CY2291, CY22801, CY2X013, CY2292, CY22M1L, CY2X014, CY22050, CY22M1S, CY2XF23, CY22150, CY22U1L, CY2XF24, CY22381, CY22U1S, CY2XF32, CY22392, CY25100, CY2XF33, CY22393, CY25200, CY2XF34

Programmable XO's

Cypress's Programmable Crystal Oscillators are cost-effective programmable clock generators that can take a reference or crystal input and generate an output frequency. The devices can also be programmed in the field using a clock programming kit, so samples can be instantly customized.

LIGHTING & POWER CONTROL

EZ COLOR™ HB LED CONTROLLERS

Cypress's EZ-Color™ devices combine the power and flexibility of Cypress's PSoC programmable system-on-chip with Cypress's PrISM™ (Precise Illumination Signal Modulation) drive technology, providing lighting designers with a customizable and integrated lighting solution platform.

EZ-Color devices support up to 16 independent LED channels with up to 32 bits of resolution per channel, giving lighting designers the flexibility to choose the LED array size and color quality. These features, along with Cypress's best-in-class quality and design support, make EZ-Color the ideal choice for intelligent HB LED control applications.

Key Applications: LED ballasts, architectural lighting, general illumination lighting, stage lighting, and automotive lighting

CY8CLED16 – 16 CHANNEL HIGH BRIGHTNESS LED CONTROLLER

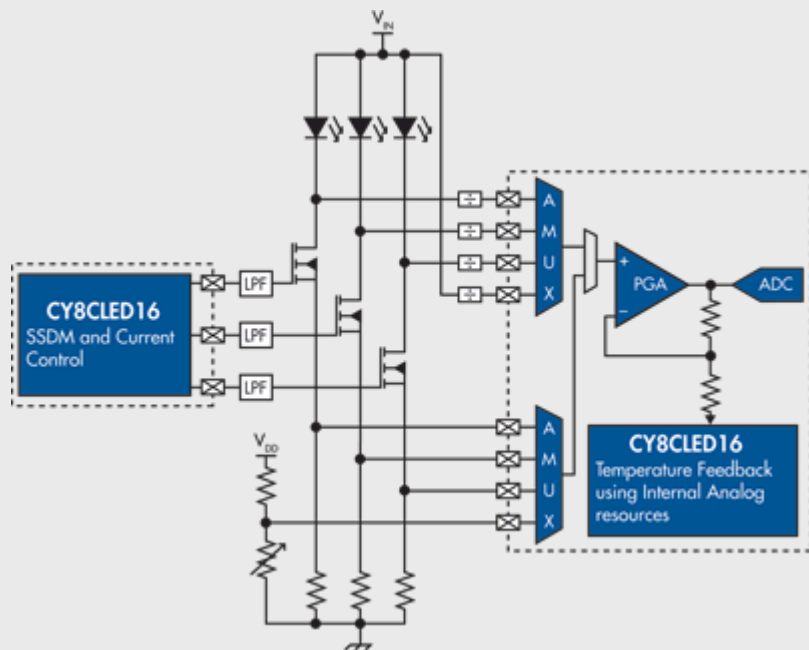

Platform Solution:

- Configurable dimmers support up to 16 LED channels
- Dimmers independently programmable from 8 to 32 bits of resolution
- PrISM method eliminates low frequency blinking inherent in typical PWM solution
- Spread spectrum signal decreases radiated EMI immunity

Easy to use:

- Modular development tools enable faster time-to-market

POWERPSOC® POWER CONTROLLERS

PowerPSoC® is the first device to combine the power of an embedded controller with integrated high-power peripheral functionality. This includes four internal 32 V, 1 A rated low-side n-channel MOSFETs, four 32 V, 6 MHz rated current sense amplifiers with adjustable gain settings, four 2 MHz hysteretic controllers that can be configured as either buck, boost, or buck-boost, and a 32 V input voltage regulator. Due to the flexibility of working with the already integrated power of PSoC®, PowerPSoC offers additional functionality including Cypress's CapSense™, and additional digital (PWMs, timers, counters), analog (ADCs, PGAs), and communication (DMX512, DALI, SP I, RS-232) options. The ability to reconfigure power with this level of integration can simplify hardware design, lower testing time, and decrease bill-of-materials costs.

Key Applications: LED ballasts, general illumination, architectural lighting, stage lighting, automotive lighting, relay/solenoid drive, fan control

WORLD'S FIRST EMBEDDED POWER CONTROLLER

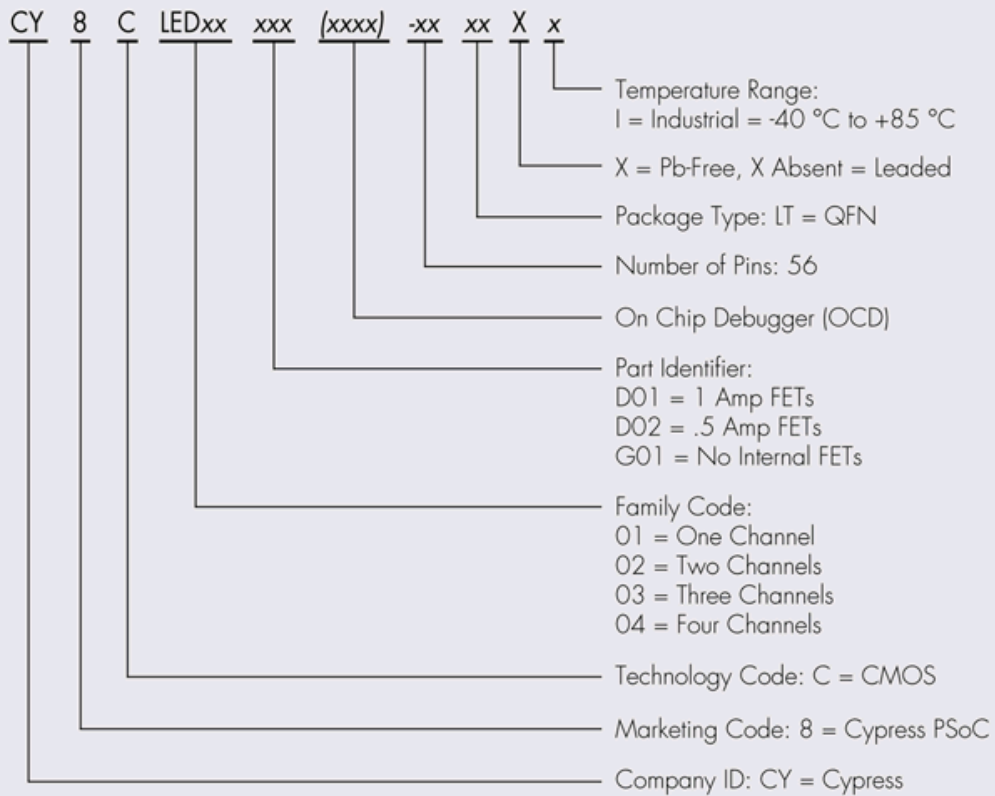

PowerPSoC Features:

- Four low-side 32 V n-channel MOSFETs
- Four 32 V, 6 MHz current sense amplifiers
- Four 2 MHz hysteretic controllers
- Six fast-response (100 ns) voltage comparators
- Fourteen 8-bit reference DACs
- 32 V input voltage regulator
- Adjustable gain on current sense amplifiers
- Buck, boost, or buck-boost options on hysteretic controllers
- Adjustable hysteresis levels

MEMORY

Cypress is an industry leader in synchronous, fast asynchronous, low power asynchronous and non-volatile SRAMs, as well as in multiport solutions and FIFO products. Cypress remains an innovative, reliable, committed supplier for your memory needs. Our long-term commitment to the broadest product line, product development, industry longevity, and most advanced technology sets Cypress apart as a memory supplier of choice. Whatever your application—from handhelds to network gear—Cypress's memory lineup is a testament to versatility: micropower, fast-asynchronous, synchronous, and nonvolatile SRAMs, as well as multiport, FIFO, and serial EEPROM memories. In a market landscape dotted by "EOL", Cypress gives you the support and confidence you need for the long run.

ELECTRONIC PRODUCT SELECTOR GUIDE (ePSG)

The ePSG is an interactive online tool that helps in quick selection of Memory devices based on the peripheral functions. It allows you to compare devices, click on part numbers for more information, and rearrange columns to highlight the most relevant data. Download the interactive Memory product selector guide at www.cypress.com/go/downloaddepsg. (Note: You must first install the Adobe Air runtime. Download it at <http://get.adobe.com/air/>.)

Cypress Semiconductor ePSG, v1.0.3 - Beta

ASYNCHRONOUS SRAM

Cypress is a market leader in the Asynchronous SRAM space, and offers the broadest portfolio of fast asynchronous and low-power asynchronous SRAM (MoBL™) devices. Asynchronous SRAMs are used in a wide variety of industrial, medical, commercial, automotive and military applications that require the highest standards of reliability and performance. Best-in class process technology and manufacturing; steadfast customer support; and high quality design ensure that Cypress asynchronous SRAM devices meet and exceed expectations.

Async Fast SRAMs

Cypress's fast asynchronous SRAM product offerings range from 4 Kb to 64 Mb. Fabricated using Cypress's high-performance CMOS technology, these devices offer fast access times (8 to 12 ns), which makes them an ideal choice in applications such as switches and routers, IP phones, test equipment, DSLAM cards, and automotive electronics.

NEW ASYNC SRAM PRODUCT OFFERINGS 32 MB FAST ASYNC

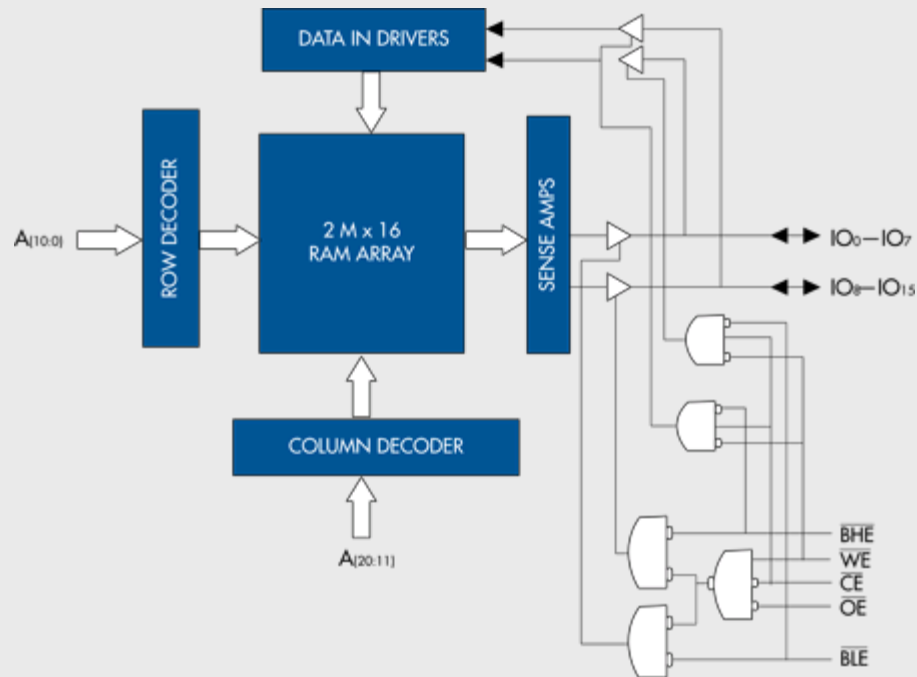

Features:

- 2 Mb x 16 and 4 Mb x 8 configuration
- 12 ns access time
- RoHS-compliant 48-BGA package with smallest ever footprint
- Based on 90-nanometer C9™ CMOS technology

The CY7C1071DV33-12BAXI and CY7C1079DV33-12BAXI, 32 M fast asynchronous SRAM devices, are in production and available today.

Key Applications: Industrial tester, high-end servers, and networking equivalence

Fast Asynchronous Part Number Decoder

Async Micropower (MoBL™) SRAMs

Cypress's micropower asynchronous SRAM product offerings range from 64 Kb to 64 Mb. Micropower SRAM devices are built on a high-efficiency 90 nm process technology, and offer industry-leading standby power dissipation (maximum) specifications. This makes them ideal for high-performance, battery powered and battery-backed solutions across a range of application segments.

CY62187EV30LL 64-Mbit MoBL™ SRAM The market's highest-density low-power SRAM

Features:

- 4 M x 16 configuration
- 8 μ A ultra-low standby current
- 55 ns access time (taa)
- RoHS-compliant 48- BGA package with a footprint of 8.0 x 9.5 x 1.4 mm, the smallest package option for a device of this density

The CY62187EV30LL-55BAXI, 64 Mb micropower asynchronous SRAM, is in production and available today.

Key Applications: Medical devices, PLC, consumer applications, and POS terminals

MicroPower SRAM Part Number Decoder

DUAL-PORT SRAMS

Cypress's high-density dual-ports are the ideal solutions for interprocessor communication in a wide range of industrial applications ranging from cellular base stations to image processing equipment.

- Densities: 8 Kb up to 36 Mb
- Voltage options: 5, 3.3, 1.8, and 1.5 V
- Operation: Synchronous and Asynchronous architectures
- Bus width: x8, x9, x16, x18, x36, and x72 configurations
- Distinguishing features: Variable Impedance Matching (VIM), Deterministic Access Control (DAC), Single Data Rate (SDR) mode, echo clocks, selectable I/O standards, and up to 200 MHz speeds

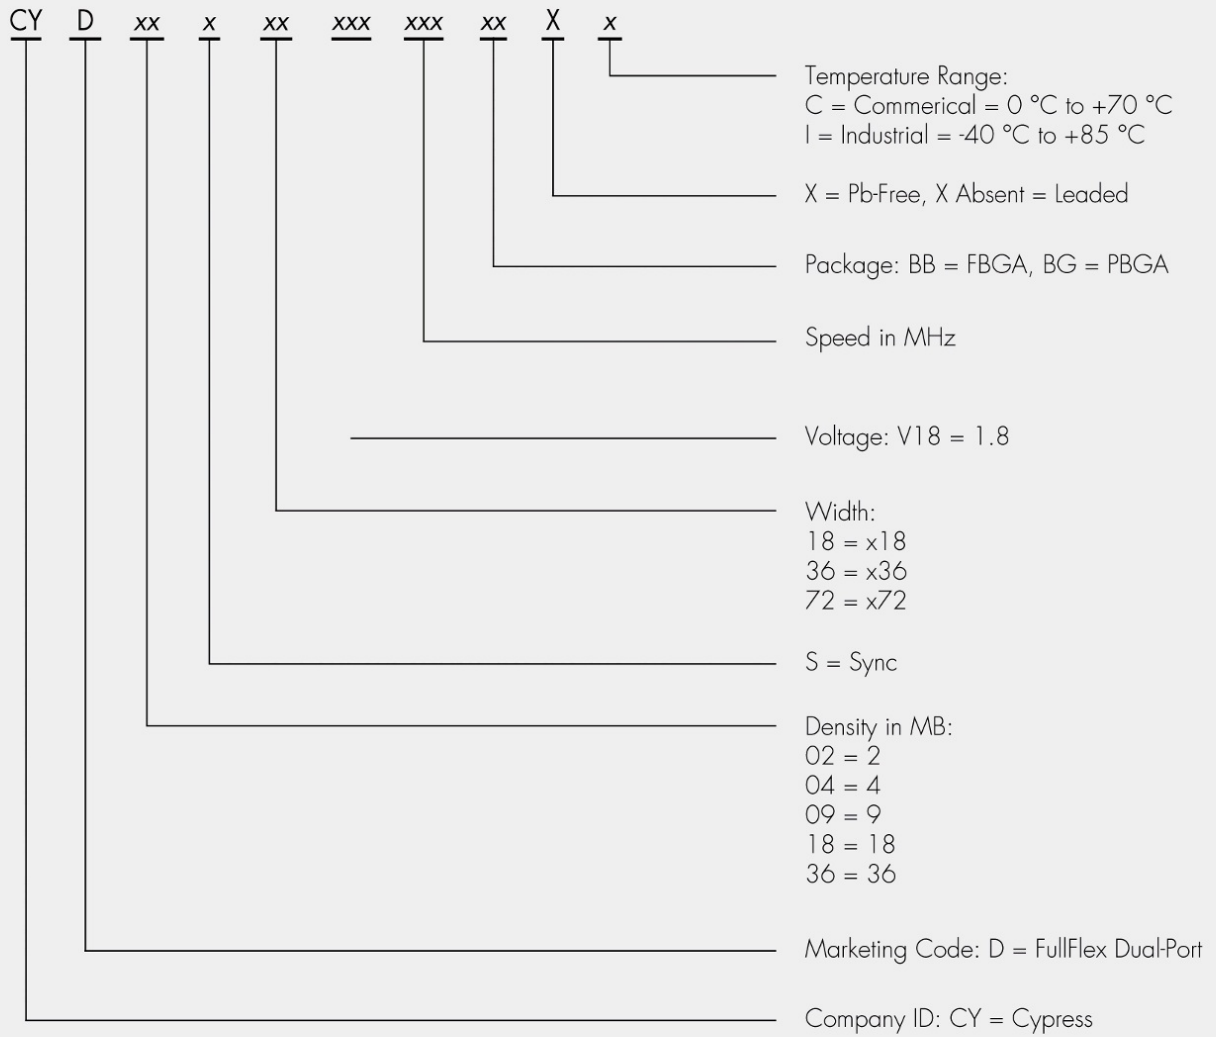

Download the Multiport's Cross Reference Guide at www.cypress.com/go/MultiPortCRG

Key Applications: Communication, industrial, military, avionics, medical imaging, and consumer

Standard Synchronous Dual-Port Interconnect Part Number Decoder

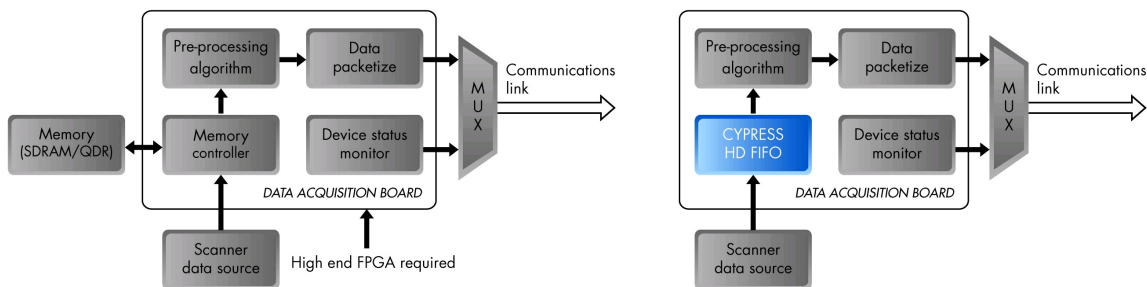

FIFOS

Cypress's high performance First In First Out (FIFO) products provide the ideal solution to interconnect problems such as flow control, rate matching, and bus matching for various markets such as video, data, telecommunications, and network switching/routing.

HIGH DENSITY FIFOS WITH PROGRAMMABLE FEATURES

High density FIFO solutions have programmable features that address varied segments such as video broadcasting, military, medical imaging, and base stations. The industry's largest offered HD FIFO memory densities are 18 Mb, 36 Mb, 72 Mb, and 144 Mb. Selectable memory organizations come with x9, x18, x36 (networking), x12, x16, x20, x24, and x32. The solutions come with up to 133-MHz clock and unidirectional operation. They possess user selectable parts for queue operating mode and user selectable LVCMOS/HSTL/LVTTL input and output. Various combinations for part offering are possible depending on customer requirements and feature priorities. Cypress's high-performance FIFO products provide the ideal solution to interconnect problems such as flow control, rate matching, and bus matching.

Key Applications: Frame buffer for common HD formats (720p, 1080i, and 1080p), HDTV/SDTV frame synchronization: switcher or format converter box, video buffering for security systems, military radar for large buffering, and medical imaging.

Medical Imaging

Synchronous FIFO Part Number Decoder

MOBL DUAL-PORTS

Cypress offers a variety of high performance and low power Inter-Processor Communication (IPC) solutions. These interconnects allow IPC between multiple processors in various applications. Our MoBL family of Dual-Ports is specially optimized for consumer and handheld devices.

ConsuMoBL Dual-Port

High-performance, low power, small package, optimized price are the 4Ps for consumer market. Today's consumer electronics market is challenged to provide new services such as DVR, triple play, and on-demand video. This increase in features and functions has led to systems with different application-specific processing units that have to share data. The ConsuMoBL Dual-Ports provide a simplified IPC and allow architects to create a modular platform that provides quick design turnaround.

Part Number	Status	Bus Width (bits)	Depth (K)	Interface Type	Type	Density (Kb)	Speed (ns)	Min. Operating Voltage (V)	Max. Operating Voltage (V)	Package	Min. Operating Temp. (°C)
CYDC128B16-55AXI	In Production	16	8	SRAM only	Asynchronous	128	55	1.8	3.3	TQFP	-40

MoBL™ ADM Dual-Port

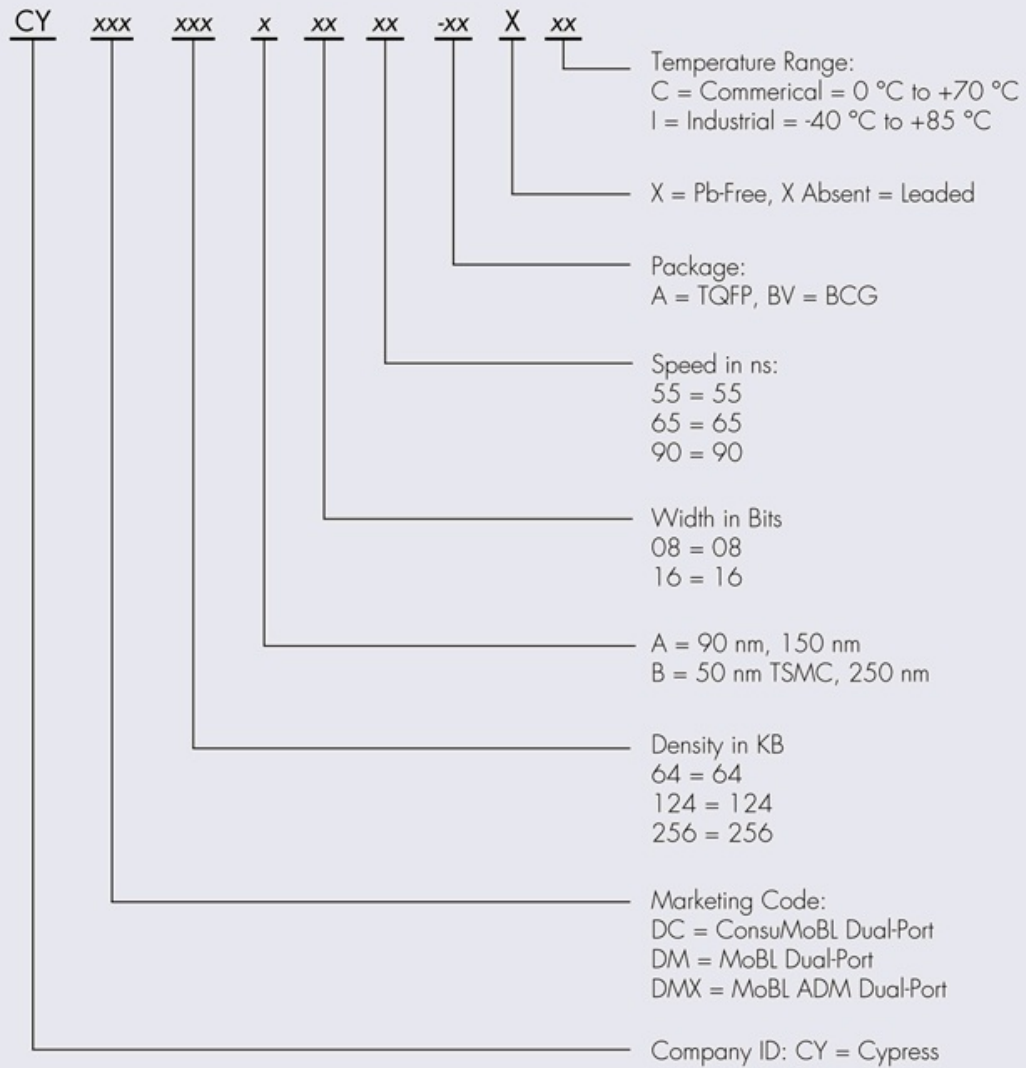

MoBL Dual-Port™ and MoBL ADM Dual-Port™ are small, low power and flexible — perfect for mobile handsets. The newer and faster wireless standards (WCDMA, TD-SCDMA, LTE, WiMax, etc.) and the increasing use of multi-media (apps, music, video etc.) require dual processor architecture in mobile handsets, especially smartphones. Cypress's MoBL Dual-Port family offers the industry's lowest power, fastest throughput, and optimal size to enable IPC between the baseband and applications processor.

MoBL Dual-Port Part Number Decoder

NON-VOLATILE PRODUCTS

Cypress's nvSRAMs use time-tested technology to produce the world's fastest nonvolatile SRAMs. Cleverly architected, the devices use a one-to-one pairing of a nonvolatile bit and a fast SRAM bit in each memory cell. In standard operation, the devices behave exactly like standard fast SRAM and can be easily interfaced to existing microprocessors and microcontrollers. When power is disrupted or lost, the event is detected, and in one quick array write, every SRAM bit is saved into a nonvolatile bit (in under 13 ms) using the saved energy in a small capacitor. Data is automatically recalled from nonvolatile bit to SRAM bit in every cell on power restore, providing seamless nonvolatility through power cycles.

Cypress offers two families of nvSRAM devices. For customers needing high access speed, and parallel interfaces, Parallel nvSRAM devices ranging from 64 K- 8 M density are an option. For designs that need low I/O serial interface, our Serial nvSRAM devices featuring high-speed SPI and I²C interface are an ideal option. RTC options are available on both device types.

Key Applications: Storage/networking, metering, industrial controls, automotive, military, and data communication

Serial nvSRAM Part Number Decoder

QUADPORT™ DSE SRAMS

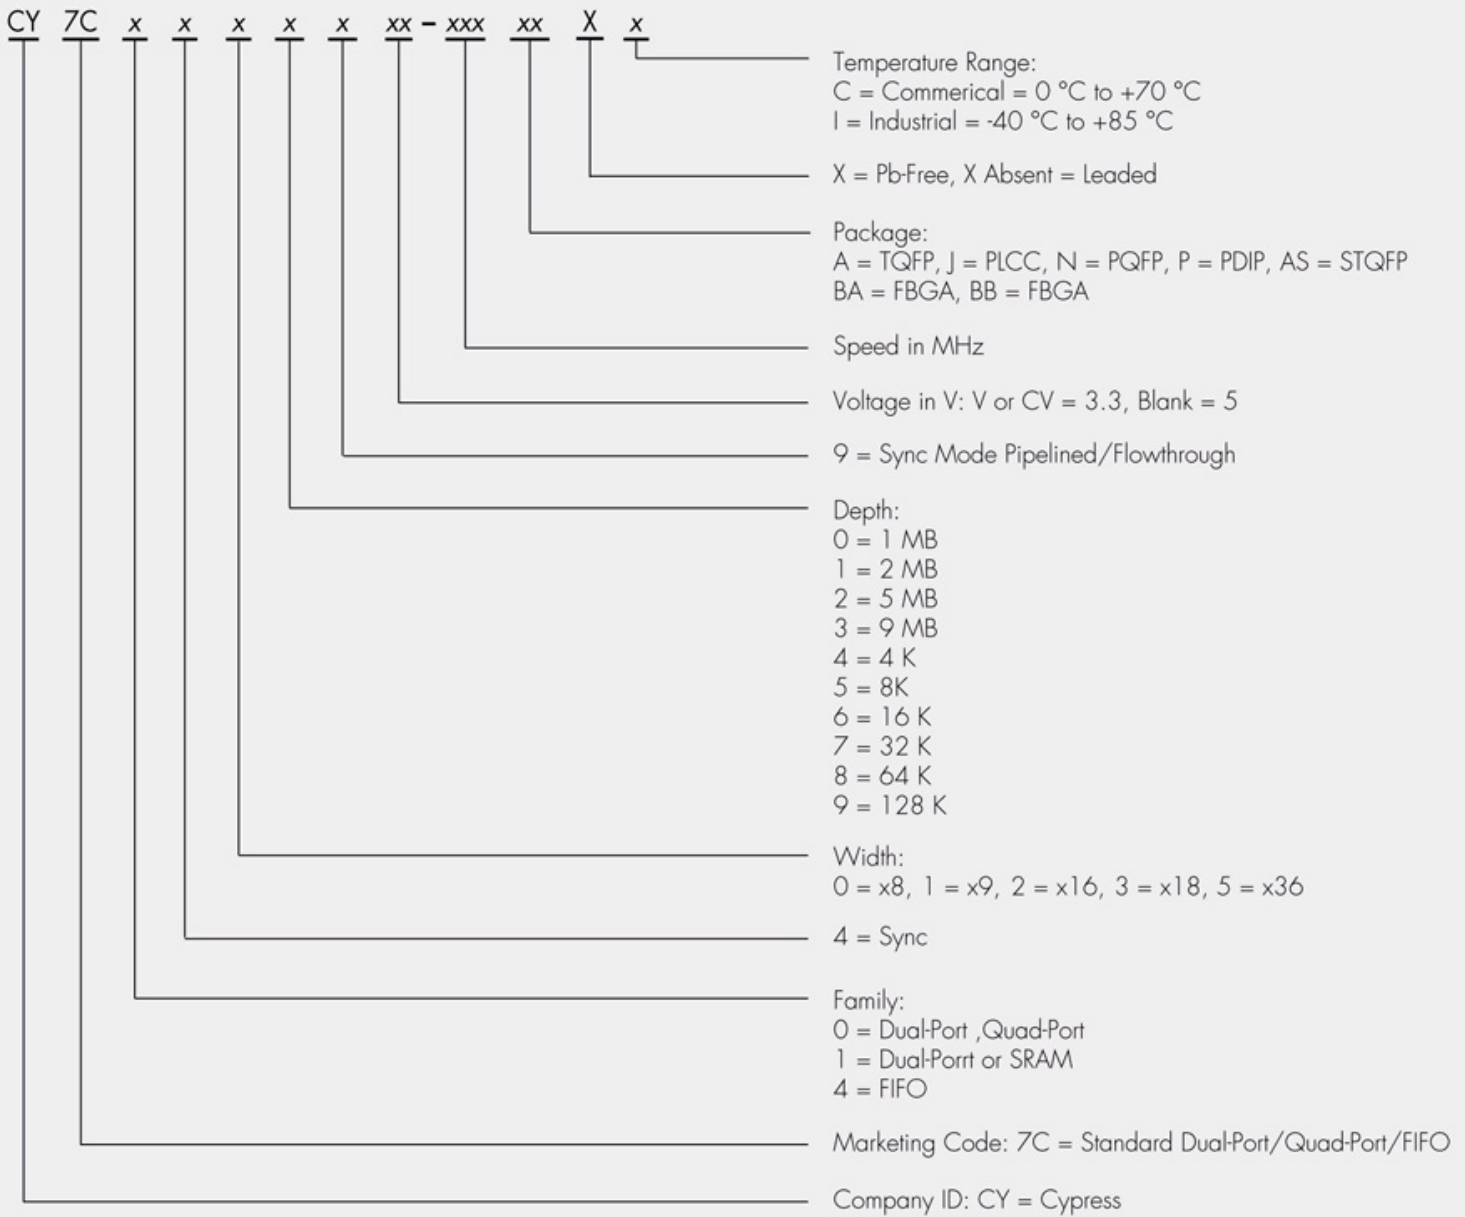

The QuadPort™ Datapath Switching Element (DSE) family offers four completely independent ports that can simultaneously access the 64K x 18-bit data storage array and operate in different frequency domains. Each port can read or write data at 133 MHz, giving the device up to 10 Gbps of data throughput (bandwidth).

QuadPort DSE Applications: The QuadPort DSE can be used for various applications such as:

- 2 x 2 switch buffer
- Data aggregation, Data redundancy
- Packet header manipulation to help remove costly field programmable gate arrays (FPGAs) out of the datapath

SYNC SRAMS

Cypress is a leader in legacy as well as contemporary high speed SRAMs. We offer a complete portfolio of standard Synchronous Burst SRAMs, NoBL (No Bus Latency) SRAMs, and the QDR (Quad Data Rate) consortium defined QDR/DDR SRAMs. The densities in our portfolio range from 1 Mb to 144 Mb and the adoption of these SRAMs span across networking, communications, computation, industrial, high speed video, instrumentation, and military applications. Cypress offers the widest portfolio and it is comprised of hundreds of memories in a variety of speeds, bus widths, and JEDEC standard packages. Using industry standard pin outs, Cypress high speed SRAMs are easily integrated into existing designs.

DDR Part Number Decoder

DDR-II+ Xtreme

DDRTMII+ SRAMs - Xtreme Networking

The DDRTMII+ Xtreme SRAMs are similar to DDR II+ SRAMs in operation, however, offer vast performance improvements in both speed and random transaction rate. The DDR-II+ XtremeSRAMs are fit-, form-, and function-compatible with previous DDR-II+ SRAMs allowing manufacturers of network switches, routers and aggregation platforms to boost performance by simply increasing clock speeds within the system without any board design changes. They are available in the industry standard 165 FBGA package and customers have the choice of DDR-II+ Xtreme products with programmable ODT (On Die Termination).

FEATURES

- 633 MHz clock for high bandwidth (900 million transactions per second)
- 2-word burst for reducing address bus frequency
- Double data rate (DDR) interfaces (data transferred at 1266 MHz) at 633 MHz
- Bus widths of x18 and x36
- 2.5 clock cycle latency
- On-Die Termination (ODT) available
- Core VDD = 1.8 V \pm 0.1 V; VDDQ = 1.4 V to 1.6 V
- Supports 1.5 V I/O supply
- HSTL inputs and variable drive HSTL output buffers
- Pb-free package options
- JTAG 1149.1 compatible test access port
- Data valid pin (QVLD) to indicate valid data on the output

NoBL

The performance of a Standard Synchronous SRAM in applications that have frequent WRITE to READ transitions is limited. NoBL™ was invented in order to increase bandwidth in applications, like networking, that make this transition frequently.

NoBL Part Number Decoder

QDR

QDR™ SRAMs are high-performance SRAM architectures targeted for high-speed wireless and networking applications requiring data rates of greater than 250 MHz.

QDR-II devices have an added source synchronous clocking technique to enable a higher frequency of operation. These higher frequencies are enabled by an on-chip Delay Lock Loop, or DLL. QDR-II+ offers speeds up to 50% faster than QDR-II and supports both 2 and 2.5 cycle read latencies.

Part Number	Status	Architecture	Density (Kb)	Organization (X x Y)	Min. Operating Voltage (V)	Max. Operating Voltage (V)	Burst Length (Words)	Package	Temp. Classification	Min. Operating Temp. (°C)	Max. Operating Temp. (°C)

QDR-II+

QDR-II+

The QDR-II+ SRAMS are similar to QDR-II SRAMs in their operation but with additional performance improvements. The redundant data input clocks (C & /C) are not present in the QDR-II+ suite of products. Instead QDR-II+ SRAMs include a hand shake signal (Q_{VLD}) that indicates when the data will become valid thereby simplifying data capture. Customers also have the choice of QDR-II+ products with programmable ODT (On Die Termination). The QDR-II+ SRAMs have a maximum speed of 550 MHz with read latencies of either 2 cycles or 2.5 cycles, with a burst length of 2 and 4 and are available in an industry standard 165-ball BGA.

FEATURES

- Separate independent read and write data ports
- Supports concurrent transactions
- 450 MHz clock for high bandwidth
- Four-word burst for reducing address bus frequency
- Double data rate (DDR) Interfaces on both read and write ports (data transferred at 900 MHz) at 450 MHz
- Available in 2.0 clock cycle latency

QDR Part Number Decoder

QDR-II+ Xtreme

QDR™ II+ SRAMs - Xtreme Networking

The worldwide leader in SRAMs now brings the fastest and most efficient QDR™ SRAM ever. Cypress's QDR II+ Xtreme SRAMs operate up to 633 MHz and enable the next generation of high-speed networking and telecommunication applications. Cypress's Xtreme line of QDR II+ and DDR II+ devices are fit-, form-, and function-compatible with existing QDR II+ family devices, allowing manufacturers of network switches, routers, and aggregation platforms to boost performance by simply increasing clock speeds within the system without any board design changes.

FEATURES

- 633 MHz clock for Burst of 4 operation (633 million transactions per second)
- 450 MHz clock for Burst of 2 operation (900 million transactions per second)
- 11.4 GB/s maximum bandwidth
- Bus widths of x18 and x36
- 2.5 clock cycle latency
- On-Die Termination (ODT) available
- Core $V_{DD} = 1.8 V \pm 0.1 V$; $V_{DDQ} = 1.4 V$ to $1.6 V$
- Supports 1.5 V I/O supply
- HSTL inputs and variable drive HSTL output buffers
- Pb-free package options
- JTAG 1149.1 compatible test access port

QDR-II+ Xtreme Part Number Decoder

Standard Sync

Optimized for long series of Read and Write sequences. These SRAMs can double the performance of a typical Fast Asynchronous SRAM in the same application. Standard Synchronous SRAMs come in three different flavors: Pipelined Single-Cycle Deselect, Pipelined Double-Cycle Deselect, and Flow-Through.

CONTROL COMMUNICATIONS

Cypress offers a line of high-performance, low-cost communications and control processors that are compatible with legacy designs and provide double the maximum clock rate of earlier products and expanded internal memory configuration options.

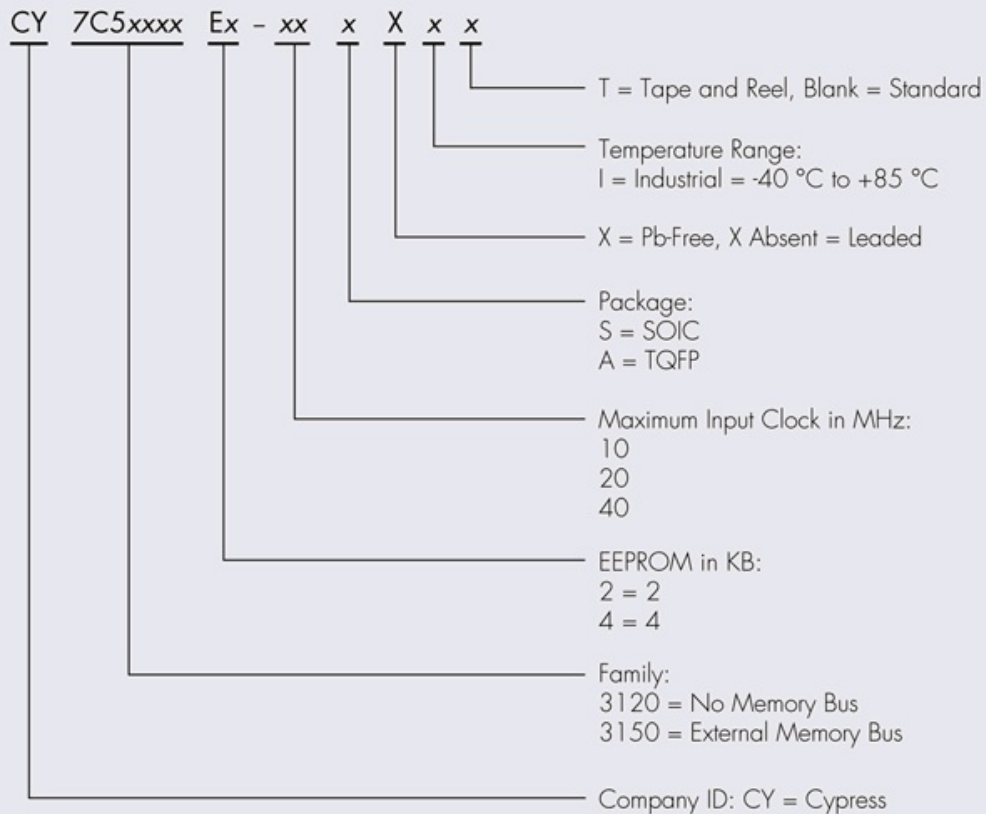

Neuron[®] chips are sophisticated devices that make it possible to implement low-cost control networking applications.

Control networks using Neuron chips are used in a wide variety of applications in building automation, industrial control, and transportation systems.

Key Applications: Heating, Ventilating, and Air-Conditioning (HVAC), lighting control, access control, fire and security monitoring, machine control, food industry applications, electrical metering, utility automation, home automation, domestic appliances, scientific and medical instrumentation, semiconductor processing, fuel monitoring and distribution, aircraft flight control, train braking and signage, and entertainment applications

PHYS

Multi-Protocol PHYs

Cypress has a large portfolio of backplane physical layer (PHY) devices, covering data transmission rates of 50 Mbps to 1.5 Gbps. These flexible devices are ideal for proprietary serial backplane applications. They also comply with many industry standards such as:

- Gigabit Ethernet
- Fibre Channel
- Enterprise System Connection (ESCON)
- Digital Video Broadcast–Asynchronous Serial Interface (DVB–ASI)
- Society of Motion Picture & Television Engineers (SMPTE), SMPTE 292M, SMPTE 259M, SMPTE 344

Key Applications: Military aircraft, controls and accessories, industrial communications and controls, medical information transmission, wireless basestations, data communications/networking, storage, and broadcast

SONET & SDH PHYs

Cypress offers a family of high performance, SONET/SDH physical layer (PHY) and framing devices that operate at OC-1 (51.85 Mbps), OC-3 (155.52 Mbps), and OC-48 (2.488 Gbps).

Part Number	Status	Standard	Min. Speed (Mbps)	Max. Speed (Mbps)	Min. Operating Voltage (V)	Max. Operating Voltage (V)	8B / 10B ENDEC	Functions	No. of Channels	Package	Min. Operating Temp. (°C)

POWERLINE COMMUNICATION

Cypress's Powerline Communication (PLC) solution enables the implementation of robust and reliable communication over AC and DC Powerlines. With Cypress's PLC solution, you do not need new wires to transmit command and control data—you can reuse the existing infrastructure. Cypress's PLC family of devices (CY8CPLC10 and CY8CPLC20) combines revolutionary PSoC® technology with reliable powerline communication to allow integration of multiple system functions in a single device, thereby reducing BOM costs and providing a smarter way to implement command and control. FCC- and CENELEC-compliant boards and complete network protocol implementation from Cypress accelerate time-to-market.

Key Applications: Lighting control, home/building automation, automatic metering infrastructure, and smart energy management

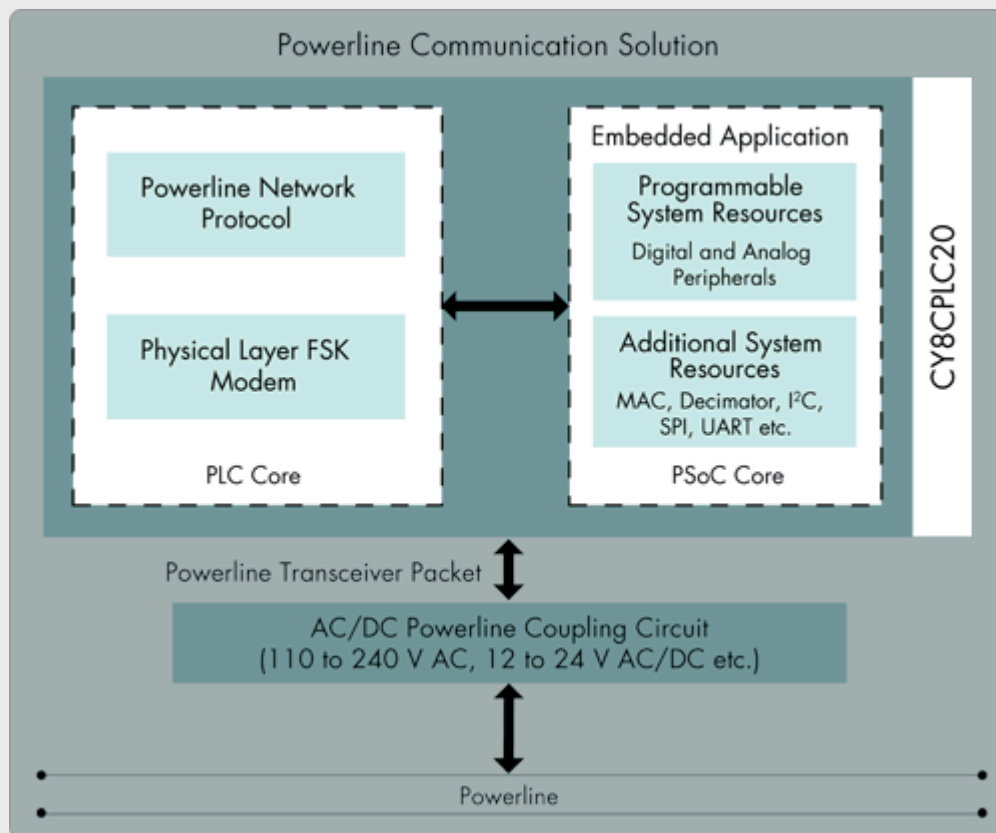

CY8CPLC20—INDUSTRY'S FIRST PROGRAMMABLE POWERLINE COMMUNICATION SOLUTION

Features

- Powerline communication solution
 - Integrated Powerline modem PHY
 - Integrates data link, transport & Powerline optimized network protocol
 - Supports bidirectional half-duplex communication using FSK modulation
 - Variable baud rates up to 2400 bps
- PSoC programmability
 - Integrated powerful Harvard architecture processor
 - 12 Rail-to-Rail configurable analog blocks and 16 programmable digital blocks
 - 32 KB flash and 2 KB SRAM on-chip
 - Enables multiple system functions on a single chip
- Flexibility
 - Ability to communicate over high voltage and low voltage Powerlines
 - Reference Designs available for both high voltage (110 to 240 V AC) and low voltage (12 to 24 V AC/DC) coupling circuits
- Compliant Standards
 - FCC (North America), CENELEC (Europe), and UL certified evaluation boards

Key Applications: Lighting and industrial control, home automation, automatic meter reading, and smart energy management

Powerline Communication Part Number Decoder

VIDEO (SMPTE) PHYS

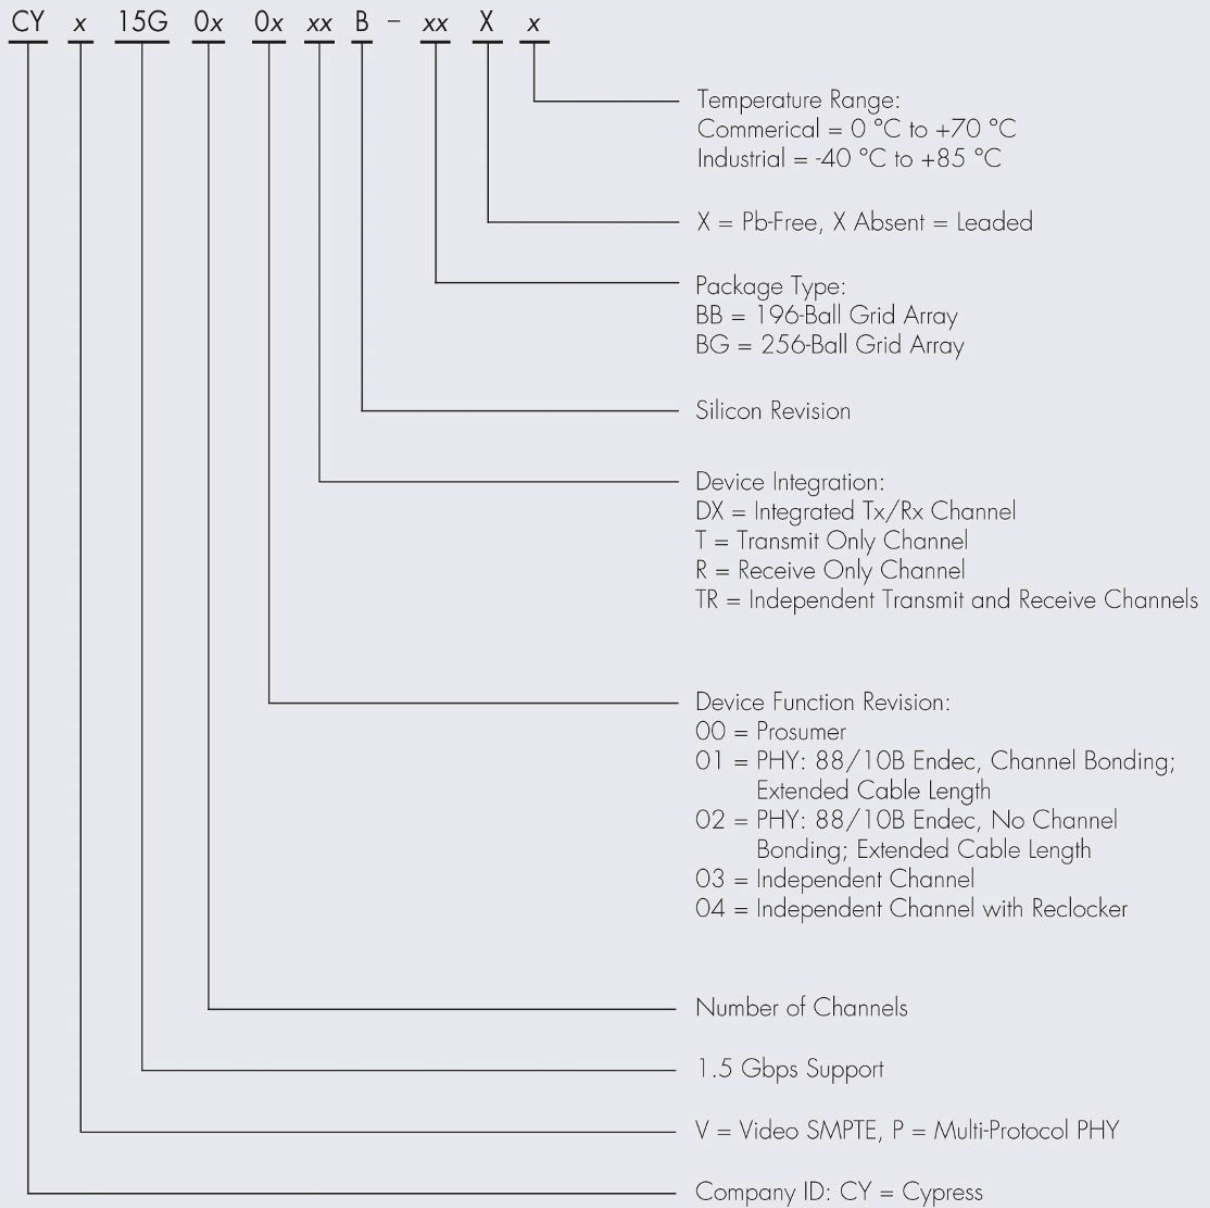

Cypress supplies a chipset for the transmission of digital video signals. This chipset is based on our popular HOTLink family and complies with the Society of Motion Picture & Television Engineers (SMPTE) video encoding, SMPTE-259M, and Digital Video Broadcasting (DVB) standards.

It is widely used in professional digital video applications such as:

- Editing (titles, overlays, real-time special effects)
- Routing (for example, within a broadcast studio)
- Recording
- Storage

PSoC® PROGRAMMABLE SYSTEM-ON-CHIP

The PSoC® programmable system-on-chip platform gives you the freedom to imagine revolutionary new products and the capability to get to market faster than anyone else. PSoC is a true programmable embedded SoC integrating configurable analog and digital peripheral functions, memory, and a microcontroller on a single chip. With an extremely flexible visual embedded design methodology that includes preconfigured, user-defined peripherals, and hierarchical schematic entry, you can change your mind as often as you want and stay on schedule. No more restarting projects from scratch. No more catalogs. No more limits.

PSoC WORLD

The Most Comprehensive Virtual Conference for Embedded Designers

PSoC World is the industry's most comprehensive virtual design conference, where attendees learn new design skills, train for credit, browse PSoC partner booths, and engage in live, local-language Q&A. All for free! With robust programmable analog and digital resources, and a variety of MCU cores, PSoC can integrate your designs, get you to market faster, and unleash your design creativity.

Register for the event and receive kits at discounted prices. Visit psocworld.com and view recorded events at your convenience.

PSoC 5LP - HIGH PRECISION ANALOG 32-BIT ARM® EMBEDDED PROCESSOR

Introducing Cypress's fully-qualified PSoC 5LP programmable system-on-chip family. The new devices provide unmatched high-performance programmable analog, the best ADCs available on an ARM®Cortex™-M3-based device, and the flexibility to design custom systems with 80+ pre-verified production-ready Components for the PSoC Creator™ IDE.

UNMATCHED HIGH-PRECISION ANALOG

- Best-in-class ADCs
 - 2x12-bit 1Msps SAR ADCs
 - 20-bit DelSig ADC
- 1.024V ±0.1% on-chip reference
- Precision Analog
 - OpAmps, Comparators, I/V DACs, CapSense®, Tran Impedance Amplifier, Sample & Hold, and more
- Fully functional analog from 1.71 – 5.50 V

THE MOST FLEXIBLE LOW POWER PSoC

- 0.5V start-up Boost
- 300nA low leakage Hibernate
- Widest operating range 0.5V to 5.5V

80+ PRODUCTION-READY COMPONENTS

- CapSense® touch sensing
- Segment LCD display
- Trans Impedance Amplifier

These capabilities open up new applications needing single-cell battery performance and high-precision analog to a world beyond fixed function MCUs. PSoC 5LP devices are shipping today; more information, including data sheets, applications notes and development kits, is available at www.cypress.com/go/psoc5lp.

ELECTRONIC PRODUCT SELECTOR GUIDE (ePSG)

The ePSG is an interactive online tool that helps in quick selection of PSoC devices based on the peripheral functions. It allows you to compare devices, click on part numbers for more information, and rearrange columns to highlight the most relevant data.

Use the interactive PSoC product selector guide at www.cypress.com/go/psoc5lpepsg

PSOC® 1

The PSoC family consists of on-chip controller devices that are designed to replace multiple traditional MCU-based system components with one low cost single-chip programmable device. PSoC devices include configurable blocks of analog and digital logic, and programmable interconnects. This architecture enables the user to create customized peripheral configurations that match the requirements of each individual application. Additionally, a fast CPU, flash program memory, SRAM data memory, and configurable IO are included in a range of convenient pinouts and packages.

PSoC 1 comprises 12 different families with 173 devices.

CY8C20xx6A

CY8C20xx6A family is the newest and lowest power, 1.8 V CapSense solution with an optional USB interface from Cypress, the world leader in touch sensing. This family is geared towards battery-powered applications such as handheld devices, mobile, bluetooth headsets and towards wall-plugged applications sensitive to electrical noise such as printers, LCD TVs and monitors. The CY8C20xx6A family is enabled with SmartSense™ automatic tuning technology that makes CapSense designs easier than ever to use.

CY8C21x23

PSoC architecture, consists of four main areas: the core, the system resources, the digital system, and the analog system. Configurable global bus resources allow the combining of all device resources into a complete custom system. Each CY8C21x23 PSoC device includes four digital blocks. Depending on the PSoC package, up to 2 analog comparators and up to 16 general purpose IO (GPIO) are also included. The GPIO provide access to the global digital and analog interconnects.

CY8C22xxx/CY8C21x45

The CY8C22xxx/CY8C21x45 PSoC family can have up to five IO ports connecting to the global digital and analog interconnects, providing access to 8 digital blocks and 6 analog blocks. This PSoC family is intended to for applications which require Capsense buttons in addition to core device functionality. This family has a dedicated 10-bit SAR ADC with sample and hold.

CY8C24x94

The CapSense™ Plus family provides programmable touchsensing with additional functionality via assembly or C language coding in PSoC Designer and a wide array of analog and digital interface capabilities. It supports up to fifty-six general purpose I/Os for buttons, multi-segment sliders, proximity detection, touchpads, LEDs, and other general purpose functions. The Plus feature in this family enables integration of additional functions like LED backlight, motor control, power management and gyro sensing. The family provides field upgrade capability via bootloader. This family also has the capability to support I²C, SPI, USB, and UART interfaces.

CY8C95xx

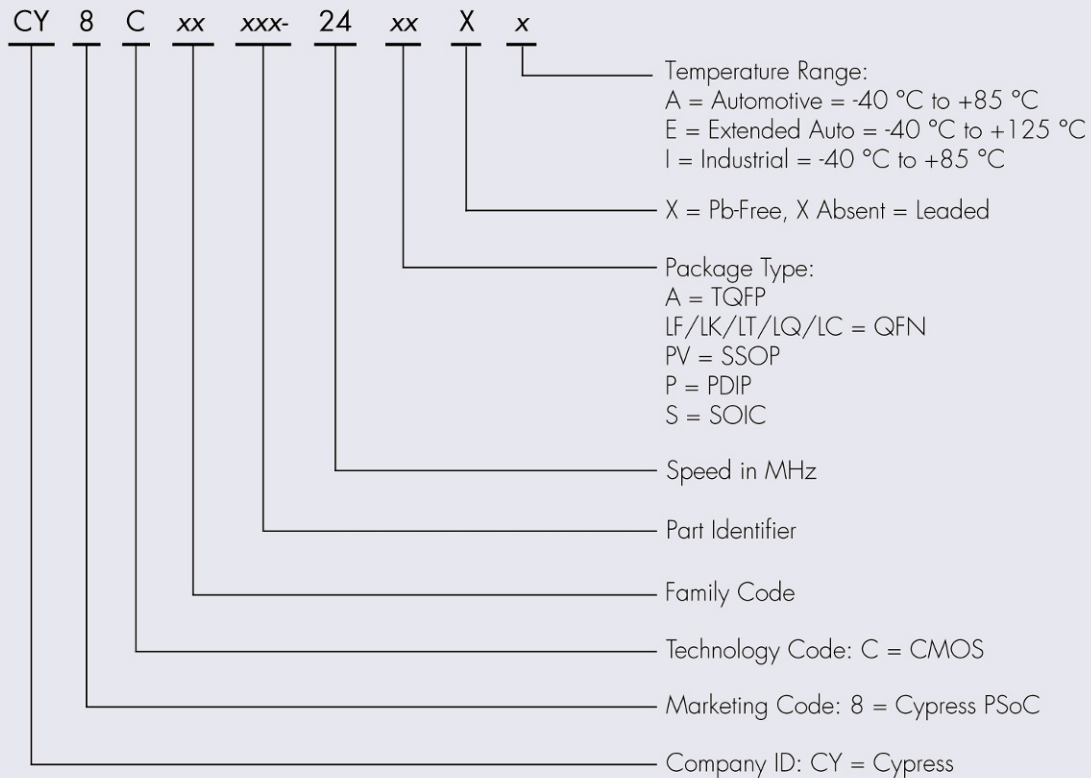

The CY8C95xxA is a multiport IO expander with on board user available EEPROM and several PWM outputs. All devices in this family operate identically but differ in IO pins, number of PWMs, and internal EEPROM size.

The CY8C95xxA operates as two I²C slave devices. The first device is a multi port IO expander (single I²C address to access all ports through registers). The second device is a serial EEPROM. Dedicated configuration registers can be used to disable the EEPROM. The EEPROM uses 2-byte addressing to support the 28 Kbyte EEPROM address space. The selected device is defined by the most significant bits of the I²C address or by specific register addressing.

The IO expander's data pins can be independently assigned as inputs, outputs, quasi-bidirectional input/outputs or PWM outputs. The individual data pins can be configured as open drain or collector, strong drive (10 mA source, 25 mA sink), resistively pulled up or down, or high impedance. The factory default configuration is pulled up internally.

PSoC 1 Part Number Decoder

PSOC® 3

PSoc 3 is a true programmable embedded system-on-chip integrating configurable analog and digital peripheral functions, memory, and a microcontroller on a single chip. PSoc 3 comprises four families with 181 parts. The architecture features:

- Integrated high-precision up to 20-bit DelSig ADC
- Fixed function and programmable analog components
- Ultra low power with industry's widest voltage range
- Programmable PLD-based logic
- Programmable 8-bit universal digital blocks
- Single-cycle 8051 core up to 67 MHz
- Support for variety of communication interfaces: FS USB 2.0, CAN, SPI, I²C, UART, I²S, and more

CY8C32xxx

CY8C32xxx is the programmable digital family within the PSoc 3 portfolio and supports applications that require minimal analog peripheral integration alongside a highly programmable digital subsystem. In addition to the digital features found across the PSoc 3 portfolio, this family also has an 8- to 12-bit Delta-Sigma ADC, a single 8-bit DAC, and two comparators. The CY8C32xxx family is targeted at digital requirements with lower analog requirements. Each device in this family contains:

- 50 MHz Single Cycle 8051
- 16 KB - 64 KB Flash
- 16 - 24 UDBs
- 1x12-bit 192ksps Delta-Sig ADC
- 1x 8-bit 8 msp DAC
- 2x high performance comparators
- 1.7 V to 5.5 V operating voltage range

CY8C34xxx

CY8C34xxx is the analog lite family within the PSoC 3 portfolio and supports applications that require a minimal set of analog peripherals alongside a highly programmable digital subsystem. In addition to the digital features found across the PSoC 3 portfolio, this family also has an 8- to 12-bit Delta-Sigma ADC, two 8-bit DACs, two Opamps, four comparators, and two programmable analog blocks that can be configured via PSoC Creator as PGAs, TIAs, etc. The CY8C34xxx family is targeted at digital applications with some analog processing capabilities. Each device contains:

- 50 MHz Single Cycle 8051
- 16 KB - 64 KB Flash
- 16 - 24 UDBs
- 1x12-bit ADC
- 2xdac
- 2x OpAmps
- 2x Analog blocks
- 4x Comparators

CY8C38xxx

CY8C38xxx is the precision analog family within the PSoC 3 portfolio and supports applications that require not only a large number of analog peripherals but also precision analog capabilities alongside a highly programmable digital subsystem. In addition to the digital features found across the PSoC 3 portfolio, this family also has an 8- to 20-bit Delta-Sigma ADC, four 8-bit DACs, four Opamps, four comparators, a digital filter block for IIR/FIR filtering, 0.1% accurate integrated voltage reference, and four programmable analog blocks that can be configured via PSoC Creator as PGAs, TIAs, etc.

Table Notes:

1. All devices are available in Industrial temperature range (-40 °C to +85 °C) unless noted otherwise.
2. Digital blocks can implement the following peripherals: Timers, Counters, Pulse Width Modulators, CRC, Custom Logic and many other digital peripherals.
3. Analog blocks can implement the following peripherals: ADCs, PGAs, TIAs, DACs and many other analog peripherals.

PSoC 3 Part Number Decoder

PSOC® 5

PSoC 5 is a true programmable embedded system-on-chip integrating configurable analog and digital peripheral functions, memory, and a microcontroller on a single chip. PSoC 5 comprises four families in which 68 parts are in sampling. The architecture features:

- Integrated high-precision 20-bit DelSig ADC
- Fixed function and programmable analog components
- Integrated high-speed 1 Msps SAR ADCs
- Programmable PLD-based logic, programmable 8-bit universal digital blocks
- 32-bit ARM Cortex-M3 CPU up to 67 MHz
- Support for a variety of communication interfaces: FS USB 2.0, CAN, SPI, I²C, UART, I²S, and more

CY8C52xxx

With its unique array of configurable blocks, PSoC 5 is a true system level solution providing MCU, memory, analog, and digital peripheral functions in a single chip. The CY8C52 family offers a modern method of signal acquisition, signal processing, and control with high accuracy, high bandwidth, and high flexibility. Analog capability spans the range from thermocouples (near DC voltages) to ultrasonic signals.

The CY8C52 family can handle dozens of data acquisition channels and analog inputs on every GPIO pin. The CY8C52 family is also a high-performance configurable digital system with some part numbers including interfaces such as USB and multimaster I²C. In addition to communication interfaces, the CY8C52 family has an easy-to-configure logic array, flexible routing to all I/O pins, and a high performance 32-bit ARM Cortex-M3 microprocessor core. Designers can easily create system level designs using a rich library of prebuilt components and boolean primitives using PSoC Creator, a hierarchical schematic design entry tool. The CY8C52 family provides unparalleled opportunities for analog and digital bill of materials integration while easily accommodating last minute design changes through simple firmware updates.

In addition to communication interfaces, the CY8C55 family has an easy to configure logic array, flexible routing to all I/O pins, and a high performance 32-bit ARM Cortex-M3 microprocessor core.

Designers can easily create system-level designs using a rich library of prebuilt components and boolean primitives using PSoC Creator, a hierarchical schematic design entry tool. The CY8C55 family provides unparalleled opportunities for analog and digital bill of materials integration while easily accommodating last minute design changes through simple firmware updates.

1. All devices are available in Industrial temperature range (-40 °C to +85 °C) unless noted otherwise.
2. Digital blocks can implement the following peripherals: Times, Counters, Pulse Width Modulators, CRC, Custom Logic and many other digital peripherals.
3. Analog blocks in PSoC /5LP can implement: PGA, TIA, Mixer, Sample & Hold.

It is recommended to use PSoC 5LP for new designs instead of PSoC 5. For information on migration from PSoC 5 to PSoC 5LP visit www.cypress.com/go/psoc5lp.

PSOC® 5LP

PSoC 5LP is a low power ARM® Cortex™ M3 based programmable system-on-chip device offering unmatched high-precision analog and the flexibility to design custom system solutions. Use PSoC 5LP with PSoC Creator™ components to shorten design schedules accelerating your time-to-market.

FEATURES

- ARM Cortex-M3, runs up to 67MHz, 1KB cache
- Unmatched precision analog integration
 - Best-in-class ADCs
 - 2x12-bit 1Msps SAR ADCs
 - 20-bit DelSig ADC
 - Programmable Analog includes OpAmps, Comparators, I/VDACs, CapSense®, and more
- The most flexible low power PSoC
 - Integrated Boost starts-up from 0.5 V
 - 300 nA low leakage Hibernate
 - Widest operating range 0.5 - 5.5 V
- Programmable PLD-based logic and 8-bit universal digital blocks
- Communication interfaces: FS USB 2.0, CAN, SPI, I2C, UART, I2S, and more

PSoC 5LP Part Number Decoder

PSOC® SOFTWARE

PSOC Creator

PSOC Creator for PSOC 3 and PSOC 5 Development

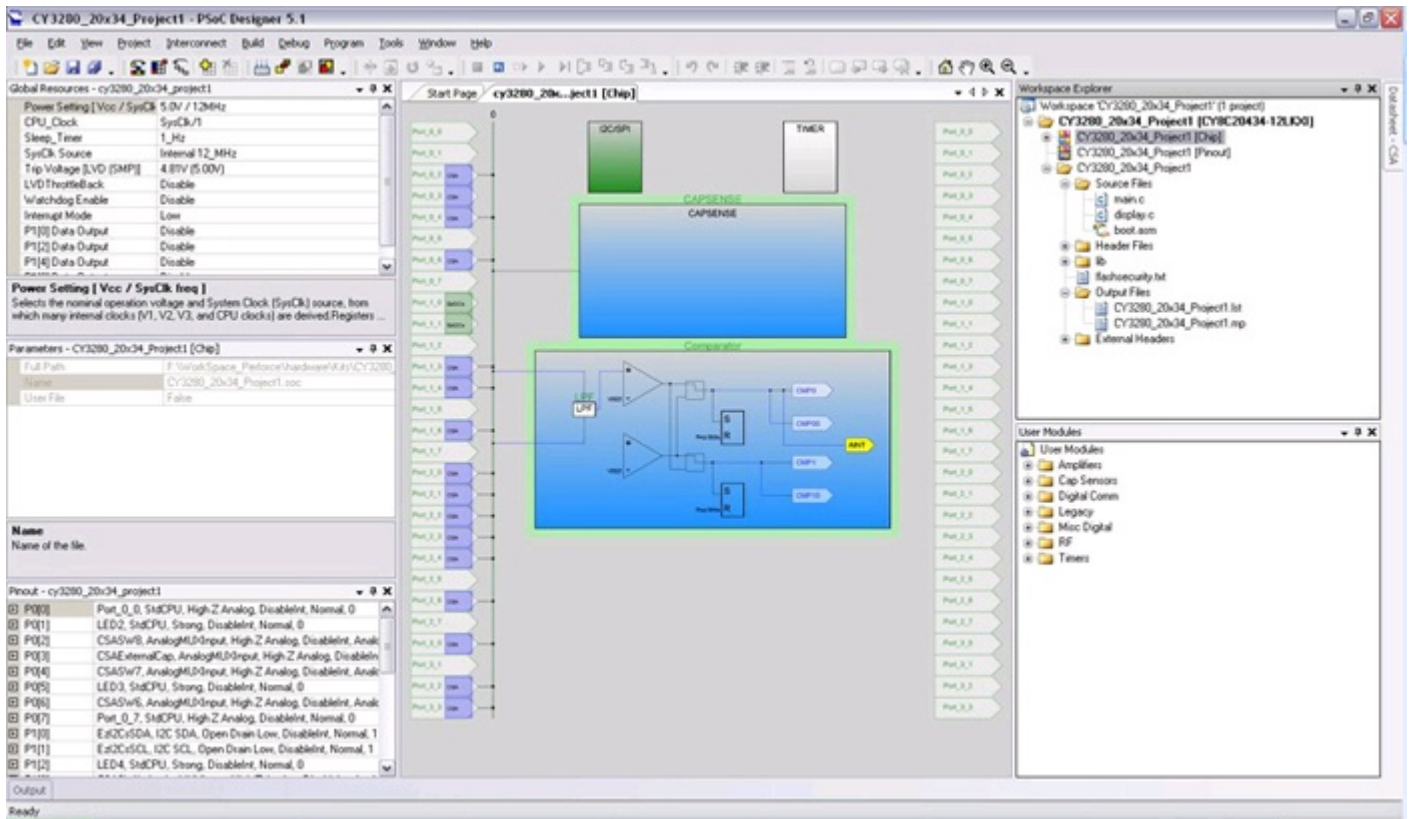

www.cypress.com/go/psoccreator

PSOC Creator is a state-of-the-art software development IDE combined with a revolutionary graphical design editor to form a uniquely powerful hardware/software co-design environment. It offers a unique combination of hardware configuration and software development in a single, unified tool. It frees embedded designers from the innovation-killing division between hardware design and software development. The custom bootloader supports instance-specific APIs. Moving the APIs into the component means that any communications component can be extended to support bootloading. In addition, users can select the bootloading channel at run-time and CDC checking is available on the image download. The combination of a software IDE with schematic capture for device configuration forms a uniquely powerful hardware-software co-design environment. Features include:

- Keil MicroVision IDE Integration
- Support for real PSoC 5 production designs
- Live start page
- Static Timing Analysis
- Timing Driven Routing
- Run-time bootloader channel selection
- Bootloader support in UDB-based I²C
- CDC bootloader image checking

PSoC Designer

PSOC Designer™ for PSOC 1 Development

www.cypress.com/go/psocdesigner

PSoC Designer is the revolutionary Integrated Design Environment (IDE) that you can use to customize PSoC to meet your specific application requirements. It comes with a library of pre-characterized analog and digital peripherals in a drag-and-drop design environment that accelerate system bring-up and time-to-market. It allows for easy debugging and testing of designs through the integrated debug environment including in-circuit emulation and standard software debug features. Develop your applications using a library of analog and digital peripherals in a drag-and-drop design environment. Then, customize your design leveraging the dynamically generated API libraries of code. Finally, debug and test your designs with the integrated debug environment including in-circuit emulation and standard software debug features.

- Application Editor GUI for device and user module configuration and dynamic reconfiguration
- Extensive user module catalog
- Integrated source code editor (C and Assembly)
- Free C compiler with no size restrictions or time limits
- Built-in debugger
- Integrated Circuit Emulation (ICE)
- Built-in support for communication interfaces:
 - Hardware and software I2C: slaves and masters
 - Full-speed USB 2.0
 - Up to four full-duplex UARTs, SPI master and slave, and Wireless

CY8CKIT-001 PSoC Development Kit

- Quickly and easily evaluate and develop: PSoC 1, PSoC 3, or PSoC 5 applications
- PSoC Designer and PSoC Creator Integrated Development Environments
- Programmable precision analog & digital
- UART, USB, and wireless communication
- All I/O routed to connectors to allow easy prototyping

Get more information at www.cypress.com/go/CY8CKIT-001

CY8CKIT-030 PSoC 3 Development Kit

- Evaluate and develop high precision analog, low-power and low-voltage PSoC 3 applications
- Specifically designed for analog performance
- Separate analog and digital domains, regulators and ground planes
- PSoC Designer and PSoC Creator Integrated Development Environments
- Significant reduction in Leakage currents compared to CY8CKIT-001
- Onboard programmer(Cypress USB chip based) in addition to Minipro3

Get more information at www.cypress.com/go/CY8CKIT-030

CY8CKIT-050 PSoC 5 Development Kit

- Evaluate and develop high precision analog, low-power and low-voltage PSoC 5 applications
- Powered by Cypress's CY8C58LP high precision analog device family
- Demonstrates the low power operation of PSoC 5LP
- Specifically designed for analog performance
- External precision voltage reference can be added
- Special terminals to enable boost converter operation
- Onboard programmer(Cypress USB chip based) in addition to Minipro3

Get more information at www.cypress.com/go/CY8CKIT-050

TRUETOUCH® TOUCHSCREEN SOLUTIONS

INTRODUCTION

With more than four billion buttons replaced, over one billion touch solutions shipped, and over 300 patents granted or pending, Cypress is a worldwide leader in capacitive touch technology. Touchscreens are the predominant user interface for smartphones, tablets, e-readers, and other portable devices. Cypress offers the expertise you need at every stage of building a projected capacitive touchscreen, from concept to mass production. We also provide the silicon, software, tools, design, and system-level experience required to get to market quickly.

A COMPLETE RANGE OF SOLUTIONS

Whether you need simple single-touch functionality or want true multitouch with gestures, TrueTouch supports a wide range of applications. This family of single-chip solutions works with screen sizes from 1.5 to 10.1 inches with the highest in-application signal-to-noise ratio (SNR), fast refresh rates, and low active power consumption. We are the world leader in small touchscreen packages, with chips available at 3 x 3 mm. Cypress offers single layer sensors with multitouch and two-touch capabilities for thin, cost-effective devices. TrueTouch also supports multiple materials and stackup options for flexibility in design, including PET, glass, and metal mesh. Supported stackup types include sensor-on-lens, direct lamination, and display integrated solutions.

RISE ABOVE THE NOISE

TrueTouch is the worldwide leader in touchscreen performance in the presence of noise. Electrical noise from chargers, LCD displays, and other sources can have a significant impact in the responsiveness and accuracy of your touchscreen. Cypress has an array of tools to solve this problem. We have developed proprietary noise-canceling technology to deal with noise from these sources. Nothing else on the market comes close to solving these issues so effectively.

TrueTouch also delivers 10V Tx for the industry's best SNR in application. 10V Tx generates more signal in the presence of noise. SNR is directly proportional to Tx voltage. Cypress's 10V Tx more than triples the SNR of the competition, eliminating many noise problems before engineers even open their design applications. TrueTouch can also provide proprietary Tx-Boost™ technology, based on patent-pending high-voltage, multi-phase Tx drivers. Tx-Boost delivers three times the native SNR, all without the use of performance-robbing digital filters or external components.

TRUETOUCH ONE-OF-A-KIND NOISE SOLUTIONS

Charger Armor™

Charger Armor™ pulls the plug on charger noise. Noise enters the touchscreen system through a power supply, such as a mobile handset's battery charger, during the presence of touch. The mobile device industry has established EN standards for maximum charger noise, and TrueTouch easily exceeds these standards. However, for chargers that can emit noise at 20 times the spec and beyond, we have Charger Armor. It's an adaptive technology that listens for charger noise and activates when it surpasses a preset threshold to effectively deal with both periodic and broadband noise. The result is truly revolutionary charger noise immunity to the market.

Display Noise Cancellation

LCD displays are inherently noisy. This makes it difficult for touchscreen sensors to accurately read and interpret touch input. TrueTouch controllers can deliver external display synchronization, eliminating the need for air gaps or shield layers to protect against noise. This makes TrueTouch the ideal solution for all types of stackups, including in-cell, on-cell, and direct lamination.

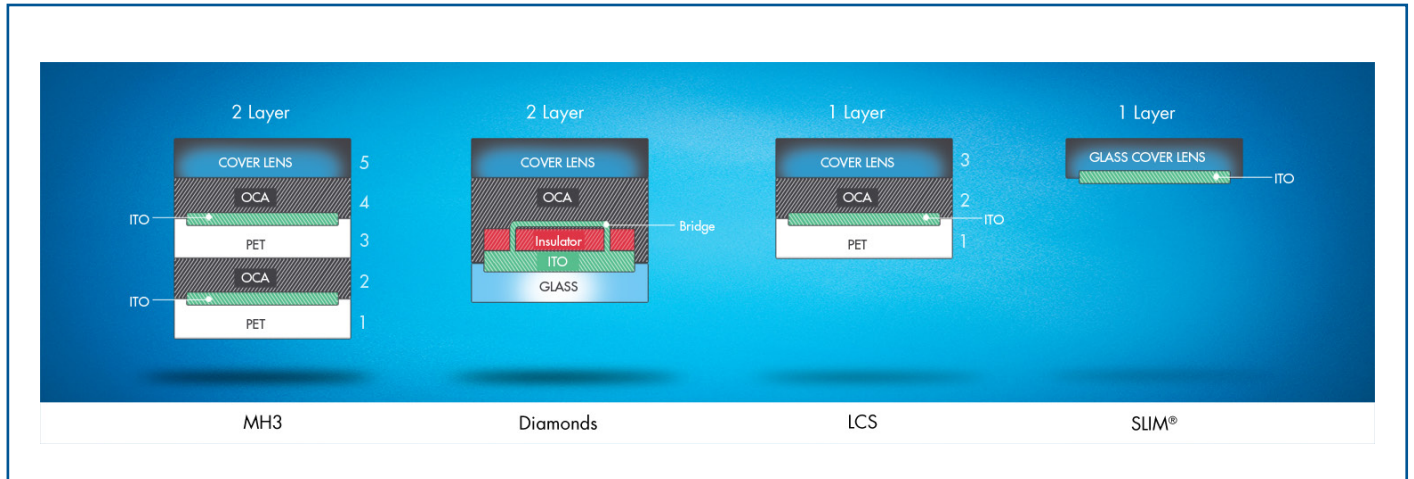

SOLUTIONS FOR EVERY DEVICE

TrueTouch features support many different designs. From support for a wide range of screen sizes to true single-layer touchscreen sensors and advanced features like waterproofing, hover, and 1 mm passive stylus, Cypress has the right technology for your needs.

In addition to offering touchscreen solutions that provide industry-leading performance and features, Cypress is here to help designers bring multitouch to the masses with an unmatched portfolio of low-cost solutions. Whether your design calls for the high-performance Gen4 family, a low-cost Gen2 device, or something in between, Cypress has the right solution for your needs. TrueTouch also delivers the premier single-layer sensor solution with our SLIM® sensor, which enables unbelievably thin multifinger designs with TrueTouch.

SLIM® - For The Thinnest Devices Yet

Our new SLIM (Single-Layer Independent Multitouch) sensor takes Cypress's ground-breaking touchscreen innovation to a new level. The world's first true single-layer multitouch sensor is a unique solution that delivers full multitouch functionality at half the thickness and cost, allowing designers to create innovative new products. SLIM does something truly revolutionary – it enables the lowest manufacturing cost, thinnest bezel, and thinnest stackup of any multitouch all-points touchscreen sensor module. Even with only one sensor layer, SLIM delivers excellent accuracy and signal-to-noise ratio, and best-in-class active power.

Screen Size Support

We have expanded our position as a leader in the small-screen market as the first company to deliver a single-chip controller exclusively for large screens. TrueTouch controllers can support everything from the tiny 1.5" screen on an MP3 player all the way up to a 10.1" tablet, with the same high performance you've come to expect from Cypress. Our portfolio of large screen solutions delivers the lowest active power consumption available, with built-in noise cancelling technology and very fast 10-finger refresh rates for screens 7 to 10.1 inches.

Advanced Features

TrueTouch supports the most advanced touchscreen functionality. A state-of-the-art touchscreen system with a flawless user interface experience involves much more than just being able to reliably detect a finger touch. Thanks to our unique use of self and mutual capacitance sensing on the same chip, TrueTouch provides an unmatched feature set, that includes true waterproofing, hover, and 1 mm passive stylus support. TrueTouch controllers enable real waterproofing, with end-customer products that meet stringent IP-67 standards in production today. Water on a touchscreen typically causes false touches and poor accuracy. Cypress delivers both water rejection and wet finger tracking to ensure normal operation in the presence of rain, mist, or sweat.

Self plus mutual capacitance sensing also enables the touchscreen controller to sense very small touches. Hover allows TrueTouch to accurately track a user's finger while hovering up to 10 mm above the surface. This unique technology allows UI designers to enable useful features like mouse-over capability, and screen magnification, and create exciting new possibilities for gaming and 3D displays. It also allows users to operate their touchscreen devices with gloves or long fingernails, something no other capacitive touchscreen controller can support.

Mobile device owners are no longer forced to use a bulky, inconvenient capacitive stylus; TrueTouch supports a 1 mm stylus for accurate handwriting and character capture and precise navigation.

KEY APPLICATIONS

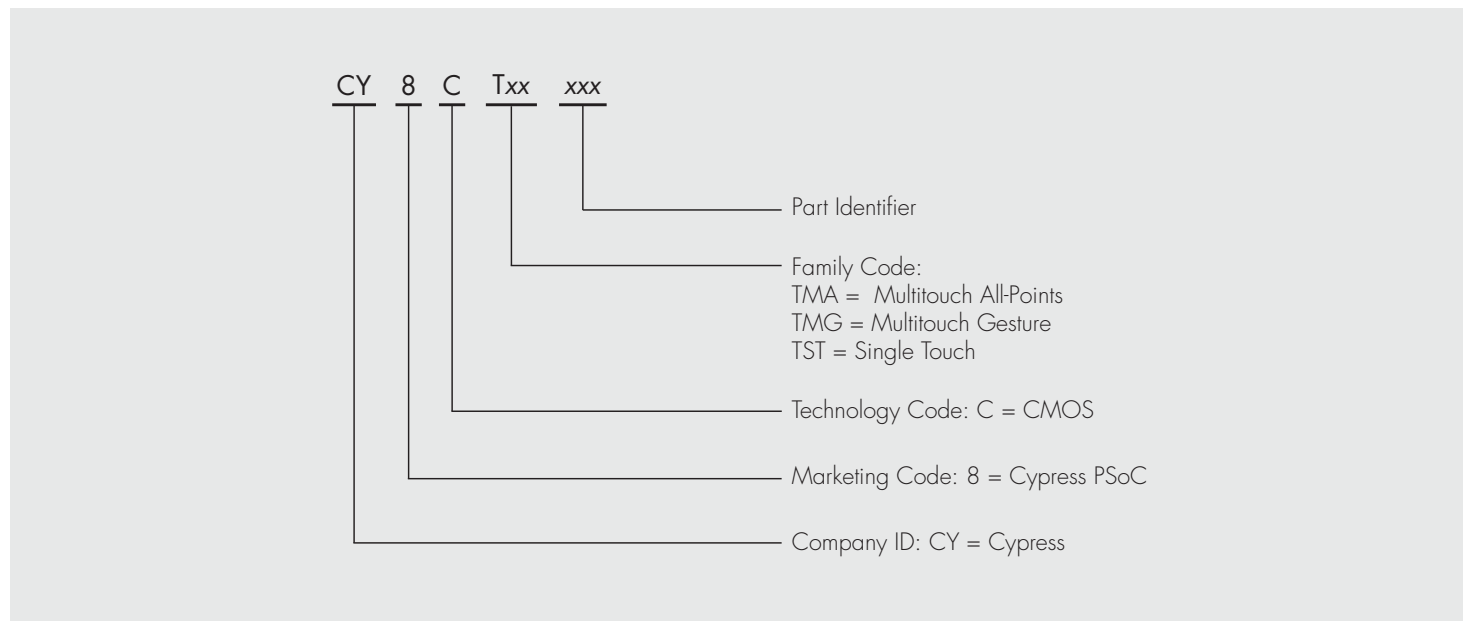

Mobile phones, tablet and notebook PCs, GPS navigation devices, digital still and video cameras, portable media players, e-readers, automotive infotainment displays, printers, white goods

FIND YOUR SOLUTION

Cypress has the world's broadest portfolio of touchscreen solutions to meet your needs. TrueTouch provides a platform of single-chip solutions to support everything from mobile handsets to tablets. Cypress can also accelerate your time to market with an easy design platform that includes assisted tuning support, a platform of single-chip solutions, and multiple stackup options for the most flexible and cost-effective designs. TrueTouch can support your designs with proven performance.

USB CONTROLLERS

BRIDGES - WEST BRIDGE® CONTROLLERS

The West Bridge® family provides optimal performance and connectivity in the embedded world, enabling direct connection between peripherals, creating ultra-fast transfers while offloading the main processor from data-intensive operations.

Antioch™

West Bridge Antioch™ (CYWB012*AB) is a three port device designed specifically for handsets, providing a direct path from PC to handset mass storage such as SD, MMC, HDD and NAND using High-Speed USB.

Part Number	Status	Clock Input Frequency (MHz)	Interfaces Supported	Min. Operating Voltage (V)	Max. Operating Voltage (V)	Package	Min. Operating Temp. (°C)	Max. Operating Temp. (°C)	Automotive Qualified

Arroyo™

West Bridge Arroyo™ (CYWB032*) is an entry level product that supports USB 2.0 and SDHC/SDIO/eMMC interfaces via a memory bus connection to the embedded processor with MSC sideloading speeds up to 15 Mbps. Arroyo will not support Turbo-MTP and does not integrate a USB switch. Arroyo is the entry level part for the West Bridge family and offered at the entry-level price.

Bay

WestBridge Bay™ (CYWB016*) is Cypress's new USB OTG and USB 2.0 solution for mobile handheld devices. Bay's SLIM™ II architecture offloads data transfer from the main baseband or applications processor, and provides the optimal user-experience with faster USB 2.0 sideloading and battery charging.

USB FULL-SPEED PERIPHERALS

Our Full-Speed product line features low-cost Serial Interface Engines (SIEs), plus those that also include a robust 8-bit RISC processor, or the popular 8051.

- **enCoRe™ III** - enCoRe USB meets PSoC® programmable system-on-chip functionality in a low-power, low-cost, highly flexible Full-Speed microcontroller
- **enCoRe™ V** - With a flash size of up to 32 K, this is a highly integrated, cost-effective Full-Speed USB microcontroller solution ideal for applications that require a Full-Speed USB interface for outstanding performance such as a wired gaming mouse or high-end dongles
- **EZ-USB FX1™** - Faster, extended technology for ultra high-performance

USB HI-SPEED HUBS

Since 2002, Cypress's USB hubs have been playing a part in increasing the proliferation of USB products in many applications today. The Cypress hub controller portfolio includes both single and multi-transaction translator controllers ranging from two ports to four ports as well as options for both Full-Speed and Hi-Speed USB.

HX2LP

Cypress's HX2LP™ is a family of low power single chip USB 2.0 hubs with a Single Transaction Translator controller. They feature integrated upstream and downstream transceivers, a USB Serial Interface Engine (SIE) and are available in 2 or 4 port configurations. The HX2LP Lite (CY7C656*1) family is optimized for the lower end market segment.

HX2VL

Cypress HX2VL™ is Cypress's next generation family of high performance, very low power USB 2.0 hub controllers. HX2VL has integrated upstream and downstream transceivers, a USB SIE, Transaction Translator logic as well as USB Hub Control and Repeater logic. It also has integrated external components such as voltage regulator and pull-up/pull-down resistors, reducing the overall bill of materials required to implement a USB hub system.

TetraHub

Cypress TetraHub™ is a high performance Multiple Transaction Translator (TT) USB2.0 hub controller. Each downstream port of the TetraHub has its own transaction translator to provide the best USB performance no matter what class of USB device is connected it. TetraHub is ideal for applications that need guaranteed performance on each downstream port.

USB HI-SPEED PERIPHERALS

Cypress's complete portfolio of High-Speed USB Peripherals (HSP) encompasses products for both storage and video that are available in programmable or fixed function configurations. Our devices come in various package, have different I/O configurations and flexible software to provide you with the best High-Speed USB solution for your design.

General-Purpose Solutions

- **EZ-USB FX2LP™** Low-Power programmable MCU for bus- and battery-powered peripherals, pin-for-pin compatible with EZ-USB FX2

External Mass Storage Solutions

- **EZ-USB AT2LP™** Programmable USB to PATA bridge for external HDD, optical drives, and multi-role storage applications
- **EZ-USB NX2LP-Flex™** Programmable USB NAND flash controller for multi-role NAND flash drives

Key Applications: External Hard Disk Drives (HDD), USB NAND flash drives, biometric security, and set top boxes

USB HOSTS

These dual role devices switch to host mode when connected to a peripheral and to peripheral mode when connected to a host. In addition, our embedded host/peripheral controllers support both Full- and Low-Speed USB devices in either mode.

Cypress also offers Automotive Electronics Council (AEC) Q100 compliant embedded host/peripheral controllers ideal for automotive “infotainment” applications.

USB On-the-Go (OTG), a new supplement to the USB 2.0 specification, is for the portable market. Cypress has extended its position as industry leader in USB peripheral technology by taking a leading role in the OTG working group and in defining the specification.

- **EZ-Host™** — World’s first automotive qualified host/peripheral controller; Microprocessor-based 4-port host/peripheral controller
- **EZ-OTG™** — Microprocessor-based 2-port USB OTG controller
- **SL811HS** — World’s first Dual Role Device (DRD); Serial Interface Engine (SIE) with 8-bit microprocessor interface

USB SUPERSPEED PERIPHERALS

Cypress EZ-USB® FX3™ is the next-generation USB 3.0 peripheral controller, which provides highly integrated and flexible features that enable developers to add USB 3.0 functionality to any system.

EZ-USB FX3 has a fully configurable, parallel, General Programmable Interface called GPIF II, which can connect to any processor, ASIC, image sensor, or FPGA. The General Programmable Interface GPIF II is an enhanced version of the GPIF in FX2LP, Cypress's flagship USB 2.0 product. It provides easy and glueless connectivity to popular industry interfaces such as synchronous Slave FIFO, asynchronous SRAM, asynchronous and synchronous Address Data Multiplexed interface, parallel ATA, and so on.

USB TRANSCEIVERS

Cypress's TX2UL is the world's smallest USB 2.0 ULPI transceiver. TX2UL is suitable for use in any application that already has a USB controller but requires a ULPI transceiver. TX2UL supports a wide variable input voltage range of 3.0 to 5.775 V, and is configurable to clock frequencies of 13, 19.2, 24 and 26 MHz. Along with its ultra small size (2.14 x 1.76 mm), TX2UL consumes only 5 μ A in sleep mode, thus making it ideal for mobile and battery powered applications. This Cypress product is popular with USB modem dongles, handsets and other consumer electronic devices.

WIRELESS/RF

CYFI™ LOW-POWER RF

CyFi™ Low-Power RF is a PSoC-based, ultra-reliable 2.4-GHz RF solution. With its easy-to-use star network protocol, it is optimized for embedded control.

Part Number	Status	Range (m)	Throughput (Kbps)	Min. Operating Voltage (V)	Max. Operating Voltage (V)	Application	Package	Min. Operating Temp. (°C)	Max. Operating Temp. (°C)	Automotive Qualified
CYRF7936-40LTXC	In Production	100	1000, 250, 125	1.8	3.6	Wireless Embedded Control	QFN	0	70	N

Other features include Direct Spread Spectrum and active power management.

RF COMPANION MICROCONTROLLERS

Cypress offers a line of low-power, 8-bit microcontrollers that are ideal for wireless applications. The wireless enCoRe™ family consists of base parts targeting different applications. The devices feature the industry's smallest 8-bit RISC core with flash memory and a variety of internal peripheral functions.

- The enCoRe II LV family provides a 2.7 V, high I/O solution (CY7C601xx) that is optimal for keyboards and a low-to-mid I/O (CY7C602xx) solution that is optimal for mice, presenter tools, and similar applications. They provide a competitive silicon cost coupled with a high level of integration for an overall system cost reduction.
- The enCoRe III LV family provides a 2.4 to 3.6 V, mid-I/O solution (CY7C603xx) with configurable analog and digital peripherals. These devices provide a feature-rich, low-power solution for gaming, mice, presenter tools, and other applications.
- The enCoRe V LV (CY7C604xx) family provides a 1.71 to 3.6 V, mid-to-high-I/O solution (CY7C604xx), to enable true low-power wireless microcontroller designs. These devices have an increased flash size of up to 32 Kb, providing additional code space to enable feature-rich multimedia functionality in next-generation wireless HID products.

RF Companion Microcontroller Part Number Decoder

RF TRANSCEIVERS™

PRoC LP

Cypress also offers PRoC™ - a flash-based programmable radio system-on-chip. PRoC is the world's first low-cost, flash-programmable microcontroller with an integrated 2.4 GHz radio transceiver. The microcontroller core is the M8C 8-bit engine that supports a rich instruction set. It contains 256 bytes of data SRAM and 8 kilobytes code flash memory.

Part Number	Status	Range (m)	Throughput (Kbps)	Min. Operating Voltage (V)	Max. Operating Voltage (V)	Application	Package	Min. Operating Temp. (°C)	Max. Operating Temp. (°C)	Automotive Qualified

PRoC LPstar

PRoC LPstar is a complete Radio System-on-Chip device providing a complete RF system solution with a single device and few discrete components. Integrating a 2.4GHz 1-Mbps GFSK radio transceiver, DSSS baseband controller, powerful 8-bit microcontroller, 8 Kbytes Flash for user firmware code, 256 byte of RAM, PRoC LPstar is designed to implement low cost wireless systems operating in the worldwide 2.4-GHz Industrial, Scientific, and Medical (ISM) frequency band.

Part Number	Status	Range (m)	Throughput (Kbps)	Min. Operating Voltage (V)	Max. Operating Voltage (V)	Application	Package	Min. Operating Temp. (°C)	Max. Operating Temp. (°C)	Automotive Qualified

WirelessUSB™ LP

Designed for short-range desktop wireless connectivity in PC peripheral applications, the WirelessUSB™ system acts as a USB HID-class device.

Benefits

- World's most robust 2.4 GHz solution operates reliably in busy 2.4 GHz environments
- Ultra low-power optimization for battery-powered devices
- Low cost implementation and BOM integration
- Easy-to-use reference design and tools for quick time-to-market

Key Applications: Wireless mouse, wireless USB bridge, wireless keyboard, wireless presenters, gaming, and remote controls

Part Number	Status	Range (m)	Throughput (Kbps)	Min. Operating Voltage (V)	Max. Operating Voltage (V)	Application	Package	Min. Operating Temp. (°C)	Max. Operating Temp. (°C)	Automotive Qualified

WirelessUSB™ LP star

The WirelessUSB™ LPstar radio is Cypress's second generation WirelessUSB radio. It adds a range of enhanced features including reduced supply current in all operating modes, reduced crystal start up and synthesizer settling. The WirelessUSB LPstar has best-in-class noise and interference immunity, co-location capability, and long operating range.

WirelessUSB™ NL

The WirelessUSB™ NL radio is Cypress's third generation of 2.4 GHz low-power RF technology, bringing the next level of low power performance into a small 4 mm x 4 mm footprint. Fast lock times and channel switching, along with the ability to transmit larger payloads makes WirelessUSB NL perfect for streaming applications such as audio, along with HID applications such as wireless keyboards, mice, and USB dongles.

ABOUT CYPRESS

Cypress delivers high-performance, mixed-signal, programmable solutions that provide customers with rapid time-to-market and exceptional system value. Cypress offerings include the flagship PSoC® programmable system-on-chip families and derivatives such as PowerPSoC® solutions for high-voltage and LED lighting applications, CapSense® touch-sensing and TrueTouch™ solutions for touchscreens. Cypress is the world leader in USB controllers, including the high-performance West Bridge® solution that enhances connectivity and performance in multimedia handsets. Cypress is also a leader in high-performance memories and programmable timing devices. Cypress serves numerous markets including consumer, mobile handsets, computation, data communications, automotive, industrial and military. Cypress trades on the NASDAQ Global Select Market under the ticker symbol CY. Visit Cypress online at www.cypress.com.
